# AIR TREATMENT UNIT SYNTESI®

## UNITS

### AIR TREATMENT UNIT Syntesi®

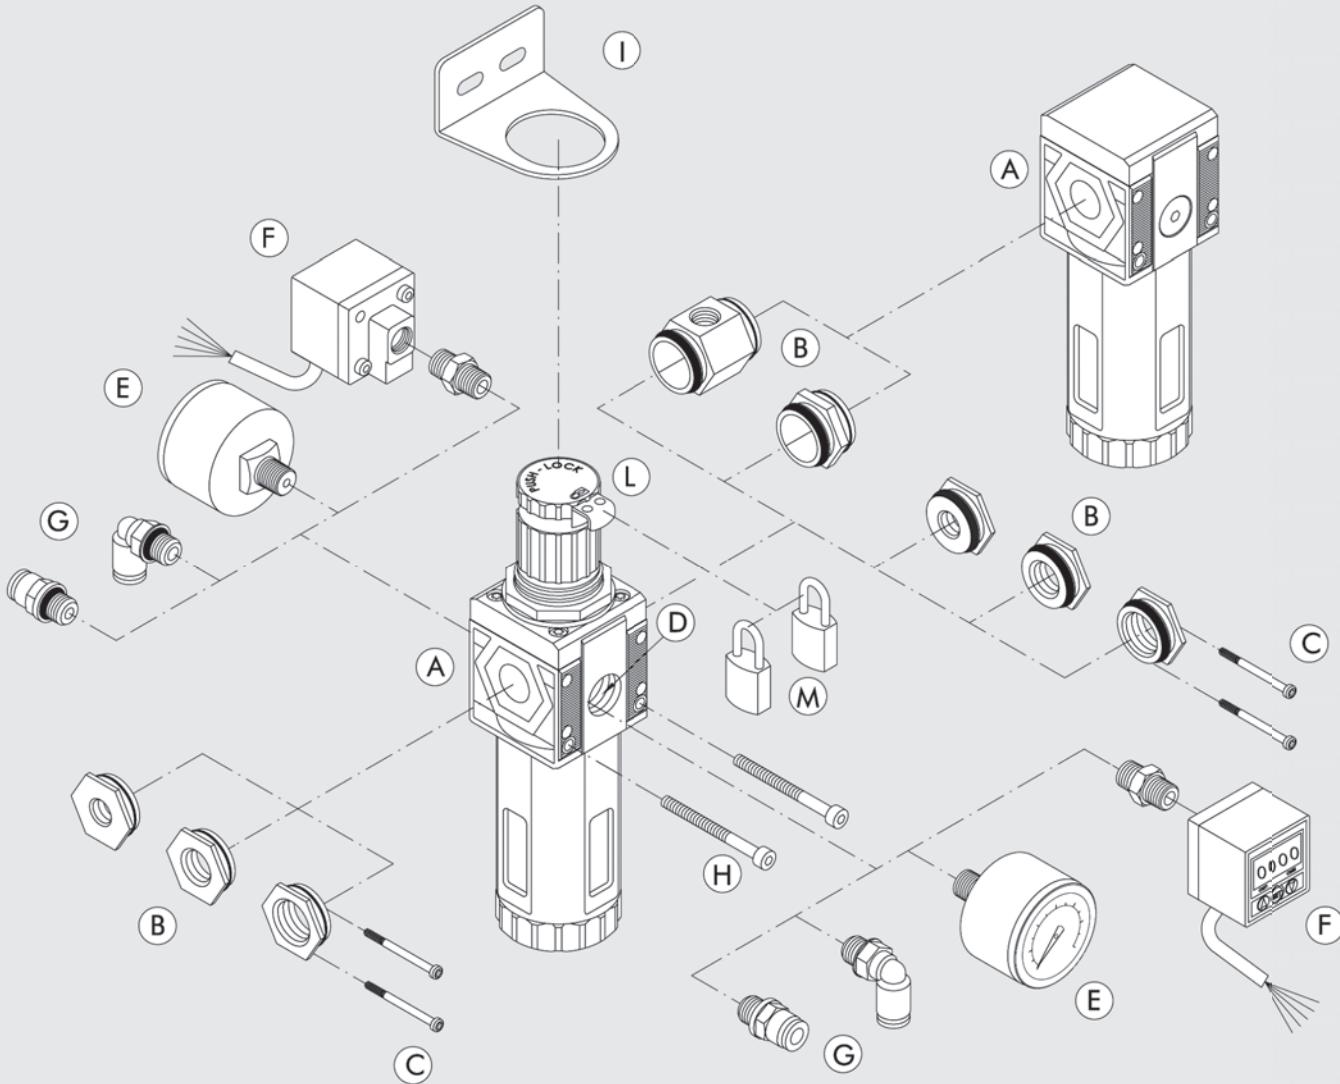

Syntesi® is an important milestone achieved by Metal Work, the result of thirty years' experience producing air-treatment units. It has been studied in minute detail to obtain the best possible performance in a reduced space and with limited weight. The capacity is much higher than that of other units of the same size.

This modular unit features a very simple yet effective system that requires no brackets, stay bolts or yoke for assembling the elements. The basic version of Syntesi® incorporates numerous functions that are not provided or are only optional with traditional units. Examples are padlockable knobs, additional pneumatic ports on the front and back, flow options from left to right or vice versa, regulators with compensation system - which are accurate even when the upstream pressure changes, with rapid downstream pressure relief - full indelible marking, automatic condensate drain even in size 1, and 360° visual inspection of oil and condensate levels.

TECHNICAL DATA		SIZE 1			SIZE 2						
Threaded port		1/8" NPT	1/4" NPT	3/8" NPT	3/8" NPT	1/2" NPT	3/4" NPT

Certification for potentially explosive atmosphere according to 94/9/CE		Ex II 3 GD c T5 T 100°C -20°C < Ta < 50°C									

## NOTES

**MODULARITY AND FLEXIBILITY**

The various elements ④ of Syntesi® can be fixed together and connected to the air feed and delivery circuit using nickel brass or passivated aluminium bushes ⑧.

The bushes are easy to remove by unscrewing the two front screws ⑨. This solution has numerous advantages:

- Reduced overall dimensions.
- Free composition of multiple elements, without the need for brackets, stay bolts or yoke.
- The metal threads of the fittings, including taper thread, allow high torques.
- Maximum flexibility, a unit can be transformed at any time by adding an element or replacing a port with another one, e.g. 1/4" NPT instead of 1/8" NPT.
- The pneumatic inlet port can be the same or different from the outlet port.

Standard ports Syntesi® are: 1/8" NPT, 1/4" NPT, 3/8" NPT for size 1; 3/8" NPT, 1/2" NPT, 3/4" NPT, 1" NPT for size 2; also an intermediate connection and an air intake are available.

For the insertion of the bushings on the size 2 it could be necessary to push with the assistance of a vice.

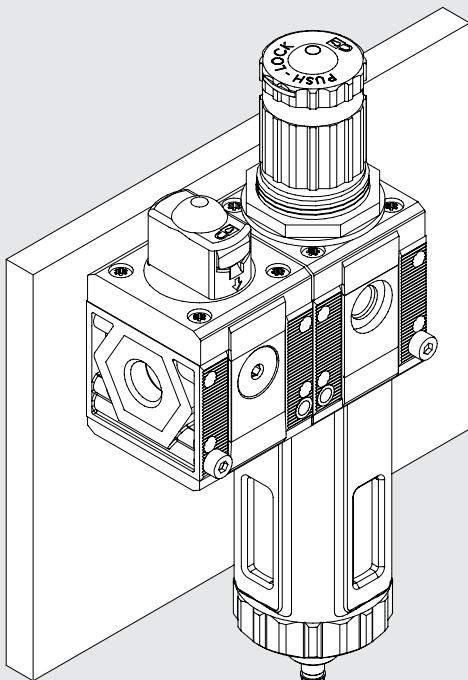

**Additional ports** ⑩. On the front and back of all Syntesi® is an (1/8" BSPP for size 1, 1/4" BSPP for size 2) port for use with pressure gauges ⑪ or pressure switches ⑫ or, considering the high flow rate, as additional air take-off ⑬. These ports are downstream of the element, so, for example, a regulator port can supply air at a set pressure or a filter port can supply filtered air (not valid for activated carbon filter and depurator).

**Wall fixing.** Only two through screws ⑭ are needed. No bulky brackets or additional flanges are required.

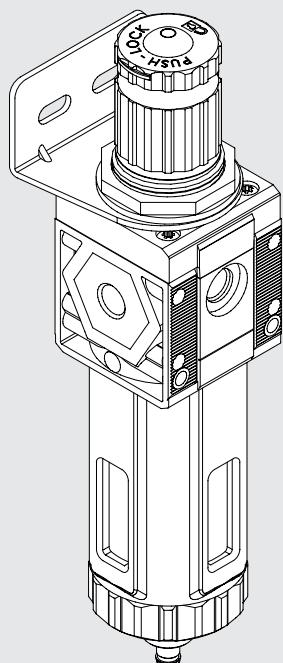

**Regulator fixing bracket.** The regulators and filter regulators can be fixed in position using a steel bracket ⑮.

**Padlockable knob** ⑯. The knobs on the regulators, filter regulator and sectioning valves can all be padlocked. The steel plate is included in the supply. You can insert up to two ⑰ padlocks on size 1, and up to three padlocks on size 2.

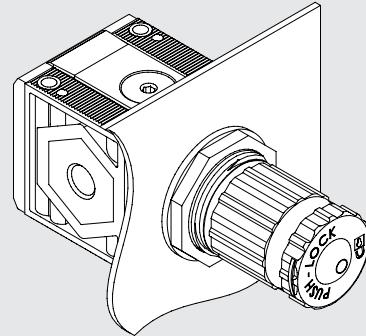

## MOUNTING OPTIONS

On the wall, using two screws

Using a bracket

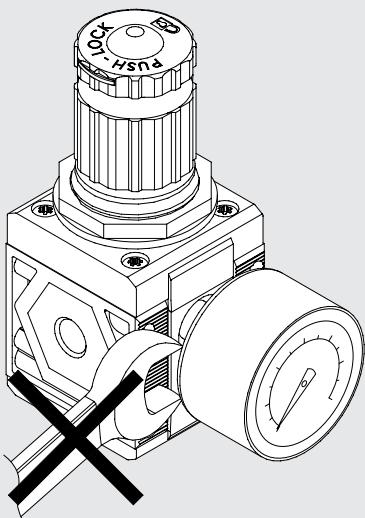

On a panel

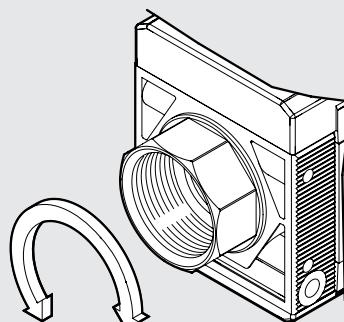

## FIXING TO FRONT PORTS

## ROTARY BUSHINGS

## LASER MARKING

Do not use a spanner for fixing taper threaded elements to the front ports. Mount by hand and apply a liquid sealant (not teflon<sup>®</sup>).

3/4" NPT and 1" NPT bushings in Size 2 rotate freely to facilitate assembly operations.

The job of the filter is to retain liquid or solid impurities present in the compressed air.

The incoming air is moved by the centrifuge unit, so that liquid particles, which are heavier, are projected against the walls of the container and force to adhere to it. As they accumulate, the create drops that deposit on the bottom by gravity.

The remaining solid particles are held back by the porous filtering element. The condensate is maintained in a quiet state to prevent the deposited impurities from re-entering the circulation. The condensate drains out through the drain cock provided.

The RMSA drain discharges when the pressure in the filter drops to zero.

Alternatively the condensate can be drained by hand by pressing the button.

The RA drain discharges condensate from the container automatically whenever necessary, regardless of the pressure level.

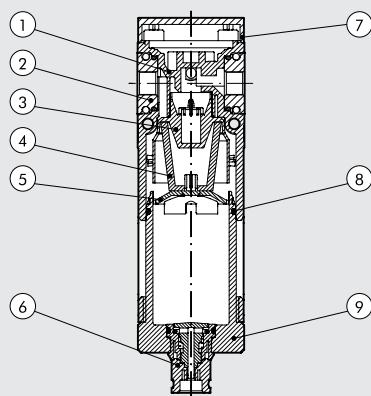

On the front and back there is a port (1/8" BSPP for size 1 and 1/4" BSPP for size 2) that can be used with pressure gauges, pressure switches or as an additional filtered air intake.

The job of the filter purifier is to separate liquid and solid particles dispersed in the compressed air with a high degree of efficiency. This separation is achieved by means of a special filtering element called a "coalescence cartridge". It is particularly indicated for eliminating traces of oil present in the compressed air. The air flow rate must remain below the maximum values to achieve the desired degree of purification. Beyond this value, there may be a decline in the quality of air from the purifier. On the front and back there is a port (1/8" BSPP for size 1 and 1/4" BSPP for size 2) that can be used with pressure gauges, pressure switches or as an additional air intake. **The air taken from here is not purified.**

## HOW THE COALESCENCE CARTRIDGE WORKS

Air from the mains – full of impurities – flows into the coalescence cartridge and then passes through the crossed micro-fibres that make up the cartridge. During this movement the liquid particles come into contact with the crossed micro-fibres and adhere to them. Due to the air pressure and gravity they join up with other micro-drops at each cross-over point and gradually increase in volume, leading to the physical phenomenon called coalescence. When they stop moving, the drops deposit on the outside of the cartridge, from which they detach and drop to the bottom. Since the volume of liquid leaving the cartridge is exactly the same as the drops arriving, the coalescence cartridge ought to work indefinitely. Solid particles are caught with the same efficiency but, unlike drops, they are not drained out and clog the cartridge. To get round this problem, it is necessary to mount a 5 $\mu\text{m}$  (200 microinch) prefilter before the fine oil filter to separate the solid particles first.

# SYNTESI® ACTIVE CARBON FILTER

## UNITS

## Syntesi® ACTIVE CARBON FILTER

Activated-carbon filtering systems achieve the highest standard of purification possible in industrial applications. They eliminate all traces of oils, solvents and hydrocarbons, and remove unpleasant odours.

The operating principle uses activated carbon, which absorbs most of the polluting particles in the air thanks to minute holes in the granules of carbon.

There are two 1/8" BSPP ports, one on the front and one on the back, for use with pressure gauges or pressure switches or, considering the high flow rate, as additional air take-off. **The air taken from here is not filtered by the activated-carbon cartridge.**

Cartridge life and efficiency can be increased by using pre-filtered (5 $\mu\text{m}$  = 200 microinch) and purified (0.01 $\mu\text{m}$  = 0.4 microinch) air.

The cartridge must be replaced at set intervals as there is no difference in load loss between an efficient cartridge and a saturated one.

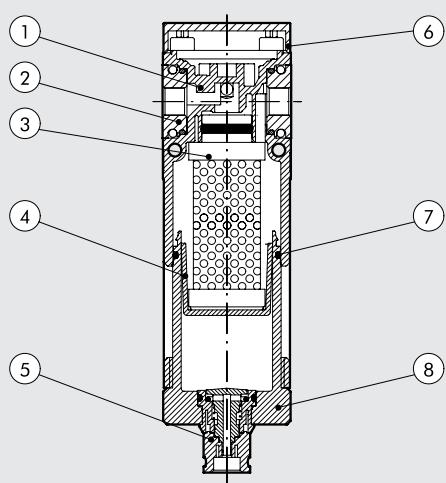

**N.B.: to ensure the performance and duration stated on the data sheet, the load loss ( $\Delta P$ ) must not exceed 1 psi.**

5U26C106	AC SY2 1 RMSA NPT

Syntesi® pressure regulator is based on the rolling diaphragm principle, which offers numerous advantages compared to systems using a flat diaphragm:

- Increased stroke, allowing wider valve aperture and hence greater flow rate.
- Decreased dynamic and pick-up friction, and hence quicker response and enhanced sensitivity.
- Greater accuracy in maintaining the pressure setting, both with both variable flow rates and different supply pressures.

The regulator includes a compensation system that keeps the pressure setting virtually constant, even when the upstream pressure changes. This is achieved mainly by the design of the valve, which is pneumatically balanced.

If the downstream pressure rises above the threshold value, the air is discharged (relief valve) until it drops below the maximum value.

A special device relieves downstream pressure rapidly when the upstream pressure drops to zero. This means the regulator can be positioned between a valve and a cylinder because the air can flow in both directions, towards the cylinder with regulated pressure, or return towards the valve during relief.

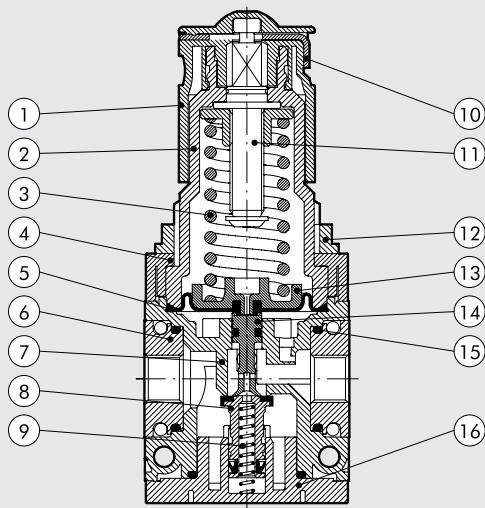

The knob is the push-lock type – once the pressure has been set, press it and it locks in position. In this position you can pull out the plate and attach two padlocks on size 1 or three padlocks on size 2 in order to avoid possible tampering. On the front and back there is a port (1/8" BSPP for size 1 and 1/4" BSPP size 2) that can be used with pressure gauges, pressure switches or as an additional regulated air intake.

# SYNTESI® IN-SERIES REGULATOR

## UNITS

## Syntesi® IN-SERIES REGULATOR

The in-series regulator is used to take air at a set pressure from the ports on the front and back of the body, while the pneumatic inlet and outlet ports are connected directly.

It is possible for instance to assemble several regulators side by side, all supplied at the same pressure, and obtain different regulated pressures, regardless of the pressure of the previous module.

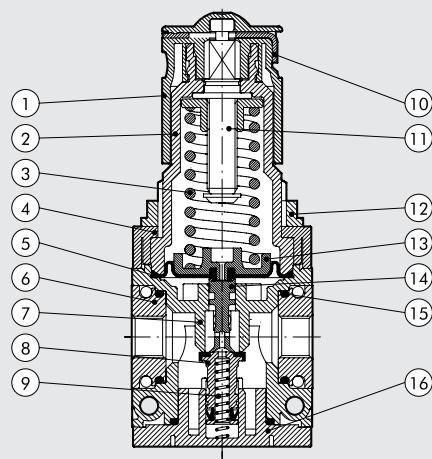

The in-series regulator uses the same construction principles as the standard regulator, so the advantages are the same, such as compensation for upstream pressure changes, relief valve, rapid relief of the downstream pressure and a padlockable push-lock knob.

## NOTES

This device combines in a single unit the functions of filtration, condensate separation and pressure regulation.

It is made up of the same elements forming the filter and the regulator, so the performance and advantages are the same:

- Separation of condensate and larger liquid and solid particles by centrifugation.
  - Two condensate drain options (RMSA and RA).
  - 360° visually inspection of the condensate level, via transport spy-holes.
  - Rolling diaphragm regulator, allowing maximum precision and flow rate, and minimal friction.
  - Compensation for upstream pressure changes.
  - Pressure relief valve.
  - Quick downstream pressure relief.
  - Padlockable push-lock knob.
  - Front and rear ports for pressure gauges, pressure switches or, considering the high flow rate, for use as additional filtered and regulated air take-off.

The pneumatic lubricator is the simplest way of efficiently lubricating the actuators linked to a circuit. As compressed air flows towards the lubricator, it encounters a flexible diaphragm which partially blocks the way, creating a small pressure difference between the inlet and outlet air. Being at the higher pressure, the oil in the cup is pumped through a tube with a filter towards the regulation pin. The quantity of oil can be metered accurately since the drops can be viewed through the transparent dome. Filling with oil must take place in the absence of pressure, unscrewing the plug next to the dome. On the front and back there is a port (1/8" BSPP for size 1 and 1/4" BSPP for size 2) that can be used with pressure gauges, pressure switches or as an additional air intake.

Recommended oils			ISO and UNI FD22 (Energol HPL; Spinozzo; Mobil DTE; Tellus oil)					
Notes on use			Install the lubricator as close as possible to the point of use. Fill the lubricator bowl with oil before pressurizing the system. Do not use cleaning oils, brake fluid oils or solvents in general.					
			For the best lubrication results, set the drip rate to one drop for 11-22 scfm					

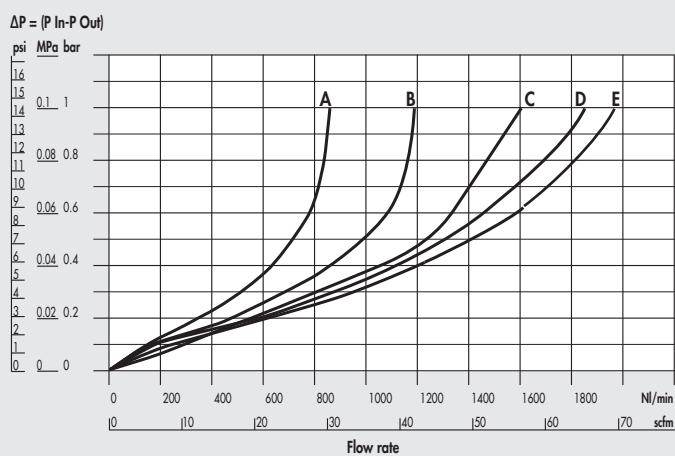

## COMPONENTS

- ① Technopolymer oil filling plug
- ② Technopolymer flange
- ③ IN/OUT bushing made of OT58 nickel-plated brass or passivated aluminium
- ④ Venturi NBR diaphragm
- ⑤ Technopolymer body
- ⑥ Clear technopolymer bowl
- ⑦ OT 58 brass oil flow regulation needle
- ⑧ Clear technopolymer cover
- ⑨ NBR o-ring gasket
- ⑩ Rilsan® oil suction pipe
- ⑪ Oil filter

# SYNTESI® SHUT-OFF VALVE

## UNITS

## Syntesi® SHUT-OFF VALVE

This device separates the compressed air circuit from the main air supply. It is a three-way valve that relieves the downstream system in the closed position. This makes it useful for maintenance operations or when the air supply to a machine or piece of equipment needs to be shut off.

Manual, pneumatic, electro-pneumatic and assisted electro-pneumatic control versions are available. The last version must be used if the inlet pressure is outside the electro-pneumatic valve operating range, so for particularly low or high pressures.

The manual version can be locked when the valve is in the closed position, using one or two padlocks.

On the front and back there is a port (1/8" BSPP for size 1 and 1/4" BSPP size 2) that can be used with pressure gauges, pressure switches or as an additional air intake.

## NOTES

The progressive starter is a pneumatic component that allows air enter the circuit gradually, thereby avoiding excessive pressure bursts.

A sophisticated system of internal valves allows two separate stages of operation. During the first stage, a quantity of air that can be regulated via a pin flows from the APR. The second stage starts when the downstream pressure reached 40÷60% of the upstream pressure, during which full-port flow is achieved. When the mechanism is deactivated, the air flow is cut off and the downstream circuit is relieved.

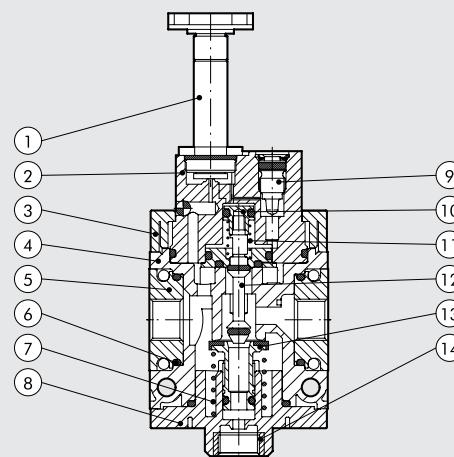

The progressive starter is particularly useful on machinery where it is important to prevent actuators from moving rapidly and out of control, or where, for safety reasons, the air in-feed needs to be gentle and gradual. It, however, there is a major leak in the downstream system, it may never be possible to achieve the pressure required to open the valve completely.

Syntesi® pressure switches feature a high degree of miniaturisation and a modern attractive design.

As they are extremely modular, the Syntesi® series can be installed facing up or down.

They come ready assembled with a 78.8 inch cable or an M8 connector with a 11.8 inch cable.

The contact is the switching type, which means it can be normally open or normally closed.

It can be regulated via a knurled push-lock handle.

On the front and back there is a port (1/8" BSPP for size 1 and 1/4" BSPP size 2) that can be used with pressure gauges or as an additional air intake.

## ACCESORIES: SECURITY KNOB

Code	Description
9200703	Security knob

NOTE: Pull outwards to remove the knob from the pressure switch on the unit. Insert the security knob and regulate the pressure switch. Then press the handle firmly to lock it in position. If the pressure switch needs to be reset, remove the security knob by forcing it laterally with a screwdriver.

The air take-off is a connecting element that is mounted between two Syntesi® modules. The 2-way version, made of metal and having restrained dimensions, has a threaded port upwards and one downwards. The 4-way version, in technopolymer, has a threaded port on each side. This gives or four additional air outlets for use as required. All Syntesi® modules come with two threaded ports, one on the front and one on the back, for use as air take-off.

## TECHNICAL DATA

## PRE WIRED DIN CONNECTORS 6 FEET CABLE 22 mm

Code	Description
888776	DIN connector 110VAC led
888777	DIN connector standard black
888778	DIN connector 24VDC

## KIT COIL SIDE 22 IP65

Code	Description
0222100100	Kit for coils 22 - IP65

Improved IP65 protection, even after prolonged exposure to atmospheric agents.

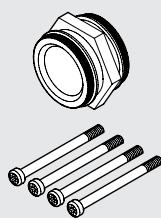

## THREADED PORT

Code	Description
9210001U	Kit IN OUT 1/8 SY1 NPT
9210002U	Kit IN OUT 1/4 SY1 NPT
9210003U	Kit IN OUT 3/8 SY1 NPT
9210011U	Kit IN OUT 3/8 SY2 NPT
9210012U	Kit IN OUT 1/2 SY2 NPT
9210013U	Kit IN OUT 3/4 SY2 NPT
9210014U	Kit IN OUT 1 SY2 NPT

Max torque 0.3 lbf ft  
Max torque 1.84 lbf ft

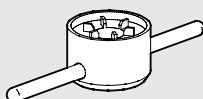

#### CONNECTING NIPPLE KIT

Code	Description
9210000	Connecting nipple kit SY1
9210010	Connecting nipple kit SY2

Max torque 0.3 lbf ft  
Max torque 1.84 lbf ft

#### BOWL DISASSEMBLY SPANNER

Code	Description
9170601	CS TF - TL BIT/SY1
9210050	CS TF - TL SY2

#### WALL-FIXING SCREW

Code	Description
9210030	M4x55 fixing screws SY1
9210031	M5x75 fixing screws SY2

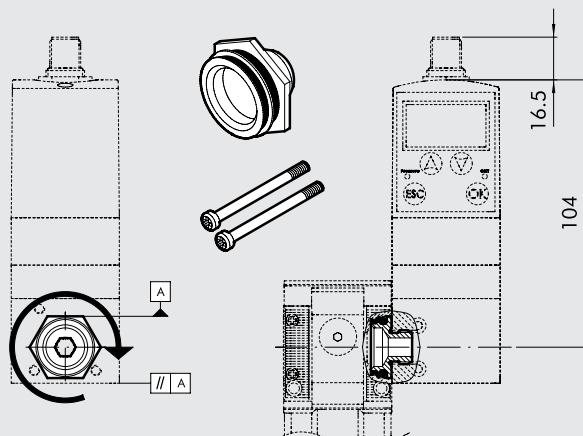

Max torque 0.59 lbf ft  
Max torque 1.47 lbf ft

#### PADLOCK

Code	Description
9062401	Padlock

#### REGTRONIC CONNECTING KIT

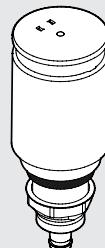

Code	Description
9210004	Adaptor for REGTRONIC 1/4 SY1

Max torque for screw, 0.3 lbf ft

Instructions:

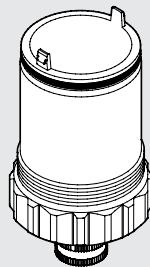

- Screw the connecting bushing onto the REGTRONIC 1/4 as far as it will go. Use sealant on the G1/4 thread to provide a further seal.
- Unscrew the bushing slightly until two surfaces of the hexagon are parallel to the body of REGTRONIC 1/4 (see diagram).
- Insert the bushing into the Syntesi® unit.
- Tighten the two self-tapping screws in the Syntesi® unit to a torque of 0.3 lbf ft max.

#### AUTOMATIC DRAIN (RA)

# GENERAL TECHNICAL DATA bit

## UNITS

## GENERAL TECHNICAL DATA bit

The units in the BIT range feature:

- reduced dimensions
- negligible load loss
- long life
- excellent quality-to-price ratio

Thanks to its technical features the BIT air treatment range is particularly suitable for de-centralized use near the final actuators.

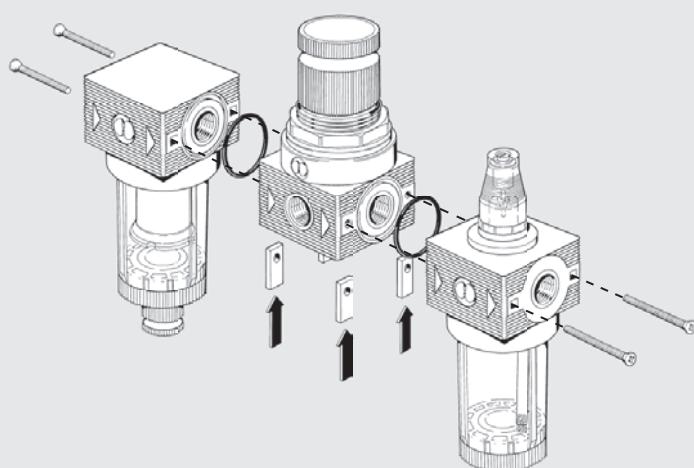

TECHNICAL DATA		BIT 1/8"	BIT 1/4"
Threaded port	μm	1/8" NPT	1/4" NPT
Degree of filtration		yellow: 5 (200 microinch); white: 20 (790 microinch); blue: 50 (2000 microinch)	
Degree of purification		99.97% a 0.01 μm	
Setting range	psi	0 to 30 - 0 to 60 - 0 to 120 - 0 to 180	
Max. inlet pressure	MPa	1.3	
	bar	13	
	psi	188	
Flow rate at 6.3 bar (0.63 MPa to 91 psi) ΔP 0.5 bar (0.05 MPa to 7.25 psi)	Nl/min	350	
	scfm	12	
Max temperature at 1 MPa; 10 bar; 145 psi	°C	- 10° to + 50°	
	°F	14° to 122°	
Elements		Filter – Regulator – Lubricator – Filter-regulator – Depurator Units: FRL, FR+L, F+L, F+D	
Mounting		By means of the bracket provided	
Fluid		Compressed air	
Compatibility with oils		Please refer to page 5-4 of the technical documentation	

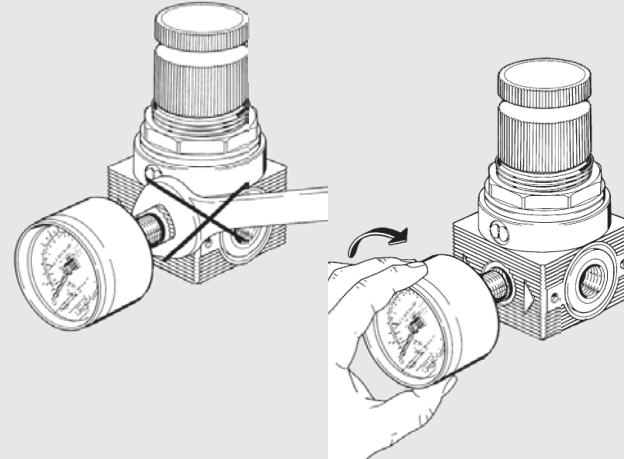

## ASSEMBLY

Use ASSEMBLY PLATES (code 9170201) to assemble the Bit elements correctly.

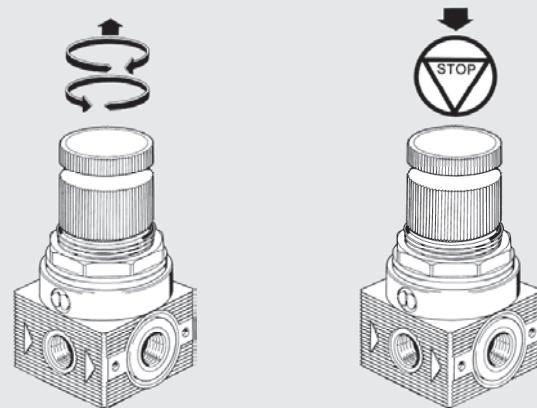

Assembly procedure:

- Fit the plates right into the slots under the body of the Bit element
- Check that there O-rings round the threaded outlet
- Assemble the elements, making sure that the flow run in the direction of the arrows marked on the body.

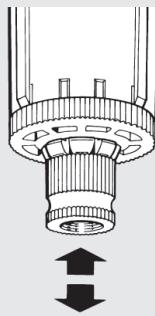

**GENERAL RULES - USE AND MAINTENANCE**

**MOUNTING THE GAUGE**

The gauge must be mounted by hand without using a spanner.  
Use fluid sealants to provide a good seal.  
N.B. Do not use Teflon.

**SETTING THE PRESSURE**

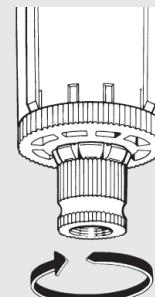

The air pressure must always be set upwards. The knob can be locked so that the set pressure cannot be altered.

With the knob in the centre position, the drain is semi-automatic.  
The drain operates when the bowl is not pressurized and closes when it is.

Press the button to drain condensate when the bowl is pressurized.

Turn the knob anticlockwise to close the valve with bowl pressurized or not pressurized.

To clean or replace the filter element unscrew the screen of the centrifuge assembly.  
Use a no. 3 compass spanner to unscrew the bowl.

# bit FILTER

## UNITS

## bit FILTER

The units in the BIT range feature:

- reduced dimensions
- negligible load loss
- long life
- excellent quality-to-price ratio

Thanks to its technical features the BIT air treatment range is particularly suitable for de-centralized use near the final actuators.

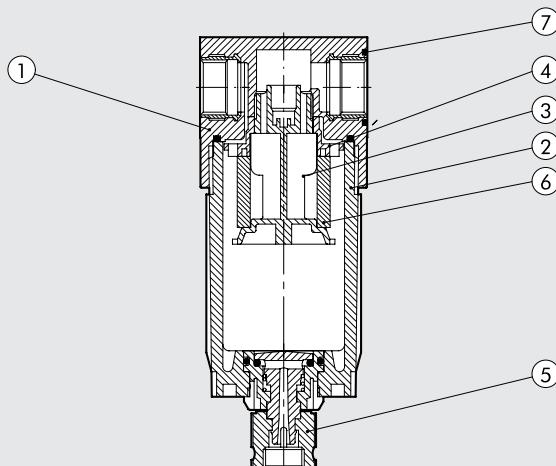

### TECHNICAL DATA

		BIT 1/8"	BIT 1/4"
Threaded port	μm	1/8" NPT	1/4" NPT
Degree of filtration	MPa	yellow: 5 (200 microinch); white: 20 (790 microinch); blue: 50 (2000 microinch)	
Max. inlet pressure	bar	1.3	
	psi	13	
Flow rate at 6.3 bar (0.6 MPa to 91 psi) ΔP 0.5 bar (0.05 MPa to 7.25 psi)	Nl/min	188	
	scfm	860	
Flow rate at 6.3 bar (0.6 MPa to 91 psi) ΔP 1 bar (0.1 MPa to 14.5 psi)	Nl/min	30.5	
	scfm	1200	
Max temperature at 1 MPa; 10 bar; 145 psi	°C	42.5	
	°F	50	
Weight	pounds	122	
Wall fixing screws		0.9	
Bowl capacity	fluid ounce oz	N. 8-32 unc, by means of the bracket provided	
Mounting position		0.54	
Condensate drain		Vertical	
		RMSA: drain with manual condensate discharge and automatic discharge at zero pressure	
Fluid		SAC: automatic drain with condensate discharge.	
		Operates by depression – requires variable air take-offs.	
		Compressed air	

### COMPONENTS

- ① Technopolymer body with OT58 threaded element
- ② Clear technopolymer bowl
- ③ Technopolymer baffle plug
- ④ Technopolymer centrifuge
- ⑤ Condensate drain (RMSA)
- ⑥ HDPE sintered filter cartridge
- ⑦ NBR gaskets

## FLOW CHARTS

FIL

$$\Delta P = (P_m - P_v)$$

psi kPa bar

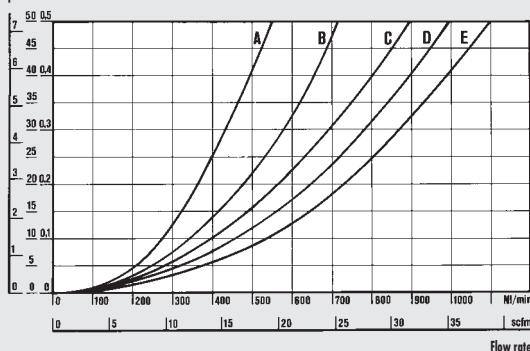

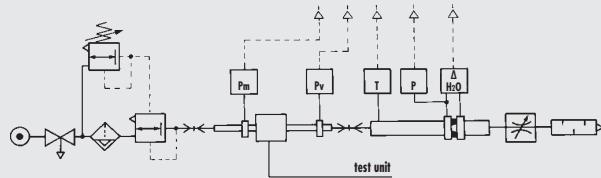

Chart referring to a filter with 1/4 ports

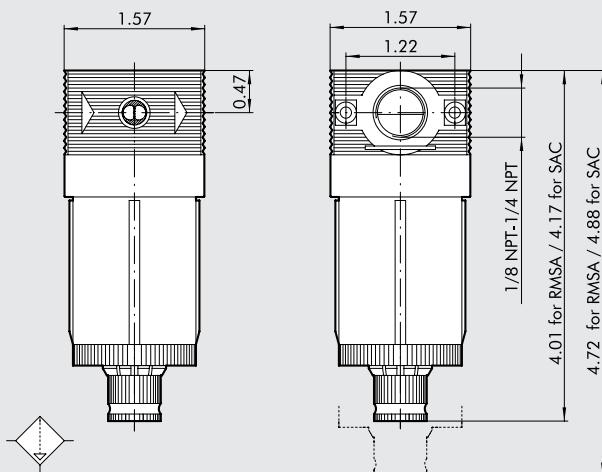

**Department of Mechanics**  
Turin Polytechnic

- Flow tests carried out at the Department of Mechanics, Turin Polytechnic, using the computerized test bench following CETOP RP50R recommendations (ISO DIS 6358-2-approved) with ISO 5167 diaphragm gauge.

$$\begin{array}{lll}
 (A) = 2 \text{ bar} - 0.2 \text{ MPa} - 29 \text{ psi} & (D) = 8 \text{ bar} - 0.8 \text{ MPa} - 116 \text{ psi} \\
 (B) = 4 \text{ bar} - 0.4 \text{ MPa} - 58 \text{ psi} & (E) = 10 \text{ bar} - 1 \text{ MPa} - 145 \text{ psi} \\
 (C) = 6 \text{ bar} - 0.6 \text{ MPa} - 87 \text{ psi} &
 \end{array}$$

## DIMENSIONS

## KEY TO CODES

FIL ELEMENT	BIT SIZE	1/8 THREADED PORT	5 DEGREE OF FILTRATION	RMSA CONDENSATE DRAIN
FIL	BIT	1/8 = 1/8 NPT 1/4 = 1/4 NPT	5 = 5 $\mu\text{m}$ (200 microinch) 20 = 20 $\mu\text{m}$ (790 microinch) 50 = 50 $\mu\text{m}$ (2000 microinch)	RMSA SAC

RMSA: drain with manual condensate discharge and automatic discharge at zero pressure.

SAC: automatic drain with condensate discharge.

Operates by depression – requires variable air take-offs.

# bit DEPURATOR

## UNITS

## bit DEPURATOR

Coalescing mini-depurator

- Space saving
- Minimum load loss as the flow rate varies
- All-round condensate level viewing

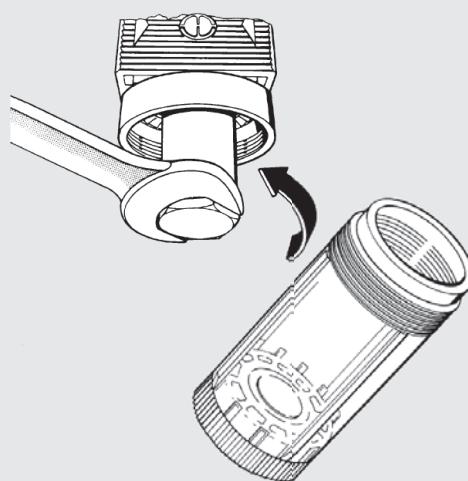

### TECHNICAL DATA

		DEP BIT 1/8"	DEP BIT 1/4"
Threaded port		1/8" NPT	1/4" NPT
Degree of purification		99.97% 0.01 µm	
Max. inlet pressure	MPa	1.3	
	bar	13	
	psi	188	
Suggested flow at 87 psi	Nl/min	200	
	scfm	7	
Maximum suggested flow rate		Please look at the flow rate curves at page 2-55	
Max temperature at 1 MPa; 10 bar; 145 psi	°C	50	
	°F	122	
Weight	pounds	1.43	
Wall fixing screws		N. 8-32 unc, by means of the bracket provided	
Bowl capacity	fluid ounce oz	0.54	
Mounting position		Vertical	
Condensate drain		RMSA: drain with manual condensate discharge and automatic discharge at zero pressure.	
Fluid		Filtered 5 µm (2000 microinch) compressed air	
Notes		It is advisable to mount a 5 µm (2000 microinch) filter upstream the depurator acting as a rough filter.	

### USE AND MAINTENANCE

When replacing the coalescing cartridge, unscrew the bowl and then unscrew the screen of the cartridge assembly. Then replace the cartridge. Use a no. 3 compass spanner to unscrew the bowl.

DEP	BIT		1/8 = 1/8 NPT 1/4 = 1/4 NPT	RMSA

RMSA: drain with manual condensate discharge and automatic discharge at zero pressure.

# bit MICRO-REGULATOR

## UNITS

## bit MICRO-REGULATOR

Micro-regulator with rolling diaphragm.

- Preset pressure stability as the upstream pressure varies.
- High flow rates with reduced pressure drops
- Quick overpressure exhaust

### Versions available

**Bit FC:** controlled relief to allow greater accuracy in regulation by means of slight continuous air relief.

**Bit for water:** used to regulate the pressure in water circuits; without blowoff valve

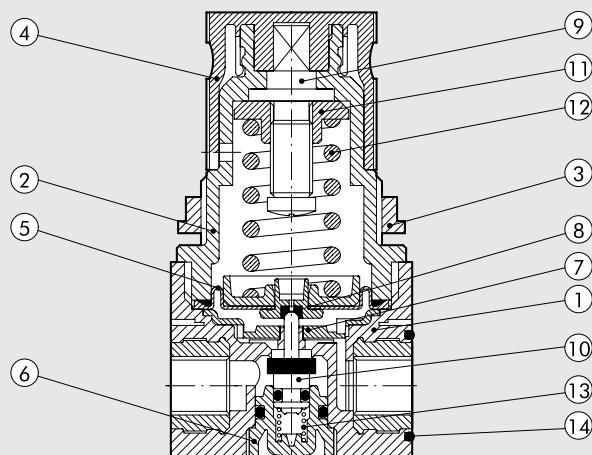

**Bit SR:** for use when the downstream circuit needs to be relieved quickly as the upstream pressure drops. Mount the SR regulator between the power supply valve and the point of use.

TECHNICAL DATA		MR BIT 1/8"	MR BIT 1/4"
Threaded port		1/8" NPT	1/4" NPT

# bit FILTER REGULATOR

## UNITS

## bit FILTER REGULATOR

Filter regulator with rolling diaphragm.

- High flow rate with reduced pressure drop
- Excellent degree of condensate separation
- Semi-automatic or automatic drain
- All-round condensate level viewing

The degree of filtration is shown by the colour of the cartridge:  
yellow = 5 µm, white = 20 µm, blue = 50 µm.

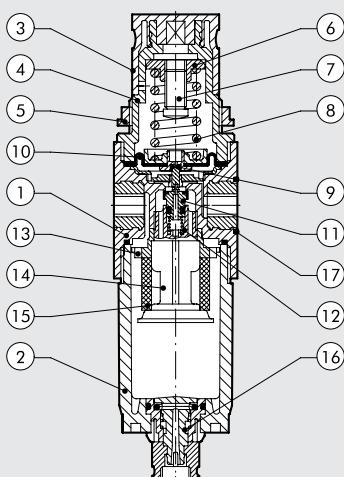

### TECHNICAL DATA

# bit LUBRICATOR

## UNITS

## bit LUBRICATOR

Mini-lubricator with high lubrication stability.

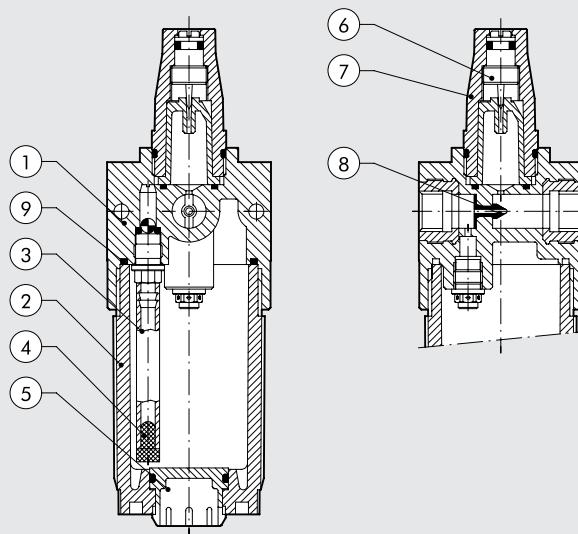

- Quantity of lubricant proportioned to air flow
- Activates at low flow rates
- Micrometric regulation of lubricant flow
- All-round oil level viewing

TECHNICAL DATA		LUB BIT 1/8"	LUB BIT 1/4"
Threaded port		1/8" NPT	1/4" NPT
Type of lubrication		Oil mist	
Bowl capacity	fluid ounce oz	0.90	
Lubricator version		Manual filling with the bowl disassembled	
Max. inlet pressure	MPa	1.3	
	bar	13	
	psi	188	
Flow rate at 6.3 bar (0.63 MPa - 91 psi) ΔP 0.5 bar (0.05 MPa - 7.25 psi)	Nl/min	400	
	scfm	14	
Flow rate at 6.3 bar (0.63 MPa - 91 psi) ΔP 1 bar (0.1 MPa - 14.5 psi)	Nl/min	710	
	scfm	25	
Max temperature at 1 MPa; 10 bar; 145 psi	°C	50	
	°F	122	
Weight	pounds	0.9	
Wall fixing screws		N. 8-32 unc, by means of the bracket provided	
Mounting position		Vertical	
Fluid		Filtered compressed air	

## COMPONENTS

- ① Technopolymer body with OT58 threaded elements
- ② Clear technopolymer bowl
- ③ Rilsan oil suction pipe
- ④ Filter
- ⑤ Technopolymer plug
- ⑥ Oil flow adjustment regulation needle made of OT58 brass
- ⑦ Clear technopolymer cover
- ⑧ NBR Venturi diaphragm
- ⑨ NBR gaskets

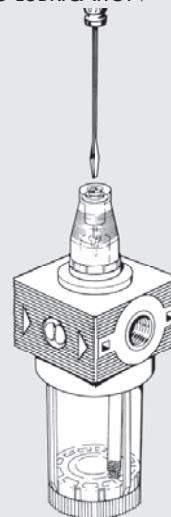

## GENERAL RULES - USE AND MAINTENANCE

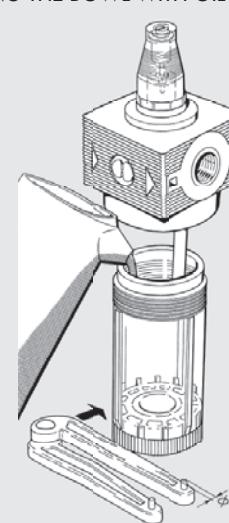

Use a no. 3 compass spanner to unscrew the bowl.

- Fit the lubricator as close as possible to the point of use
- Fill the bowl with oil before pressurizing the system
- Do not use cleaning oil, brake fluid or solvents in general
- For correct lubrication, set the drip rate to approximately 1 drop every 300-600 NL via the adjusting screw.
- Recommended lubricants:  
ISO and UNI FD22  
E.g. Energol HLP 22 (BP) – Spinoess 22 (Esso)  
- Mobil DTE 22 (Mobil) – Tellus Oil 22 (Shell).

### REGULATING LUBRICATION

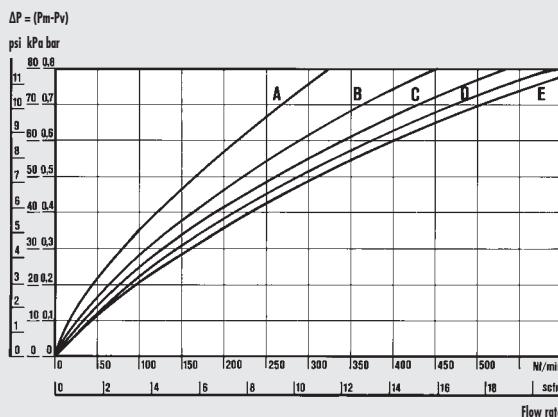

### FILLING THE BOWL WITH OIL

## FLOW CHARTS

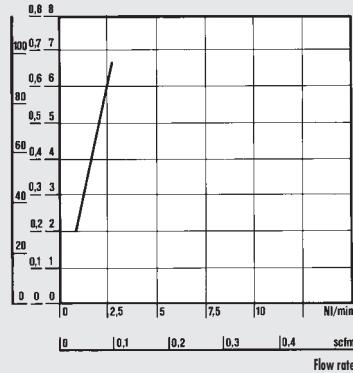

### LUB

### LUB 1/8-1/4

#### Pm

#### psi MPa bar

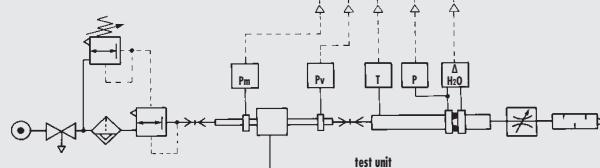

## MINIMUM OPERATION FLOW CHARTS

Minimum flow tests were performed in compliance with ISO/DP 6301/2.

**Department  
of Mechanics**

Turin Polytechnic

- Flow tests carried out at the Department of Mechanics, Turin Polytechnic, using the computerized test bench following CETOP RP50R recommendations (ISO DIS 6358-2-approved) with ISO 5167 diaphragm gauge.

$$(A) = 2 \text{ bar} - 0.2 \text{ MPa} - 29 \text{ psi} \quad (D) = 8 \text{ bar} - 0.8 \text{ MPa} - 116 \text{ psi}$$

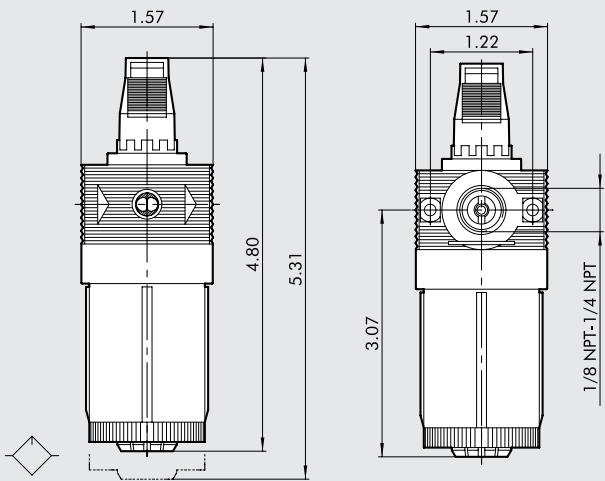

$$(B) = 4 \text{ bar} - 0.4 \text{ MPa} - 58 \text{ psi} \quad (E) = 10 \text{ bar} - 1 \text{ MPa} - 145 \text{ psi}$$

$$(C) = 6 \text{ bar} - 0.6 \text{ MPa} - 87 \text{ psi}$$

## UNITS

bit LUBRICATOR

### DIMENSIONS

### ORDERING CODES

Code	Description
5103001U	LUB BIT 1/8 NPT
5203001U	LUB BIT 1/4 NPT

### NOTES

- The air take-off takes air from the FRL unit irrespective of the assembly position.
- It is necessary when air needs to be taken from the FRL unit at any stage of the treatment (normal, filtered, regulated, lubricated, etc.).

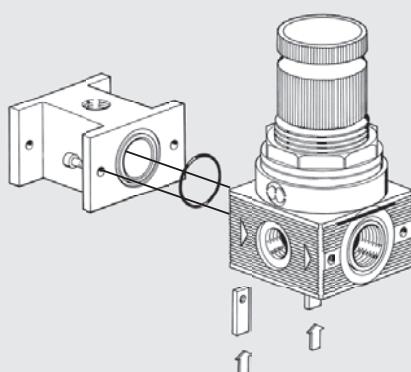

## TECHNICAL DATA

	PA
Maximum operating pressure	1.3
bar	13
psi	188
Maximum working temperature at 1 MPa; 10 bar; 145 psi	50
°C	122
°F	

## CONNECTION DIAGRAMS AND APPLICATION

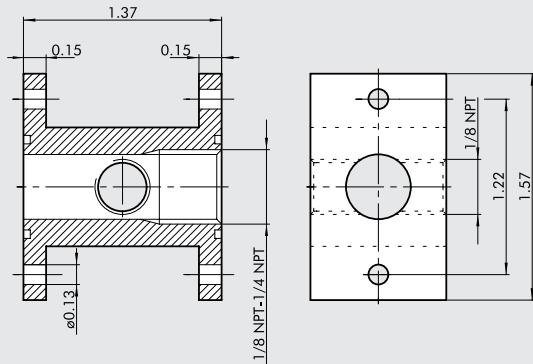

Mounting the air take-off at the inlet:  
only use two screws  
and the O-rings  
supplied in the PA kit.

Mounting the air take-off at the outlet:  
only use two screws  
and the O-rings  
supplied in the PA kit.  
Seal is provided  
by the contact  
between O-rings.

# GENERAL TECHNICAL DATA Skillair®

## UNITS

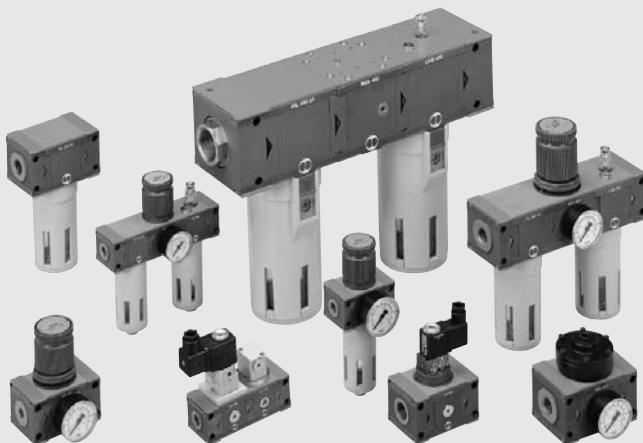

## GENERAL TECHNICAL DATA Skillair®

The superior technology of Skillair® FRL units is the expression of Metal Work innovation. The FRL system is the brainchild of a joint study by Metal Work engineers and researchers from the Department of Mechanics in Turin. The integration of metal alloys and super-resistant techno-polymers is the result of co-operation between CESAP (European Centre for the Development of Plastic Applications) and leading international companies such as Du Pont, EMS Chemie and Hoechst. The installation of advanced processing and quality control systems guarantees the reliability of Skillair® FRLs.

### Technical features

The Skillair® units incorporate very interesting technological features:

- Compactness: with the same flow capacity our unit is one of the smallest on the market.
- Modularity: various elements such as filters, reducers, lubricators, 3-way valves, progressive actuators and air take-offs can be combined at will. With the modular system the FRL units can be removed without disturbing the pipes.
- Easy maintenance: Any of the elements or the entire unit can be removed without disturbing the remaining part or pipes.

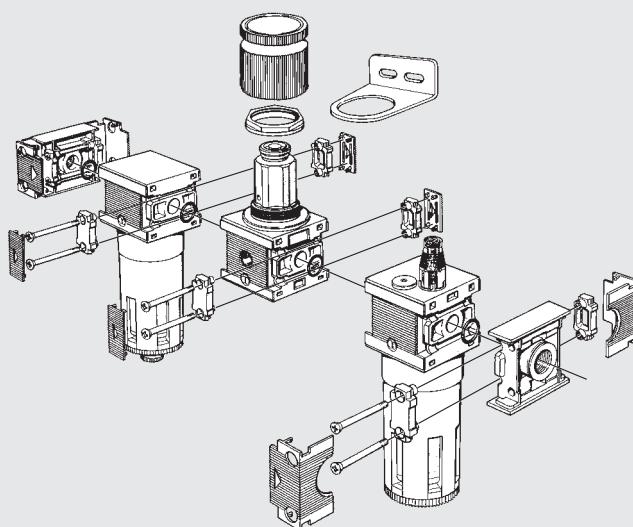

TECHNICAL DATA		SK 100	SK 200	SK 300	SK 400
Threaded port	NPT	1/4"	3/8"	1/4"	1/2"
Degree of filtration	µm			yellow: 5 (200 microinch); white: 20 (790 microinch); blue: 50 (2000 microinch)	
Degree of purification	µm			99.97% at 0.4 microinch	
Setting range	bar			0 to 30 - 0 to 60 - 0 to 120 - 0 to 180	
Max. input pressure	MPa	1.5		1.3	1.3
	bar	15		13	13
	psi	217		188	188
Flow rate at 6.3 bar (0.63 MPa - 91 psi) ΔP 0.5 bar (0.05 MPa - 7.25 psi)	Nl/min scfm			From 1100 to 20000 From 39 to 700	
Fluid				Lubricated or unlubricated compressed air	
Temperature range at 1 MPa; 10 bar; 145 psi	°C °F			-10 to +50 14 to 122	
Elements comprising the range		Filter, Depurator, Regulator, Pilot operated regulator, In-series Regulator, Filter-regulator, Lubricator with various lubricant filling systems, Circuit Shut-off Valve, Progressive Actuator.			
Compatibility with oils		Please refer to page 5-4 of the technical documentation			

### Skillair® MODULARITY

The FRL units can be removed from the system without disturbing the pipes.

This can be done with a single element or with the entire system.

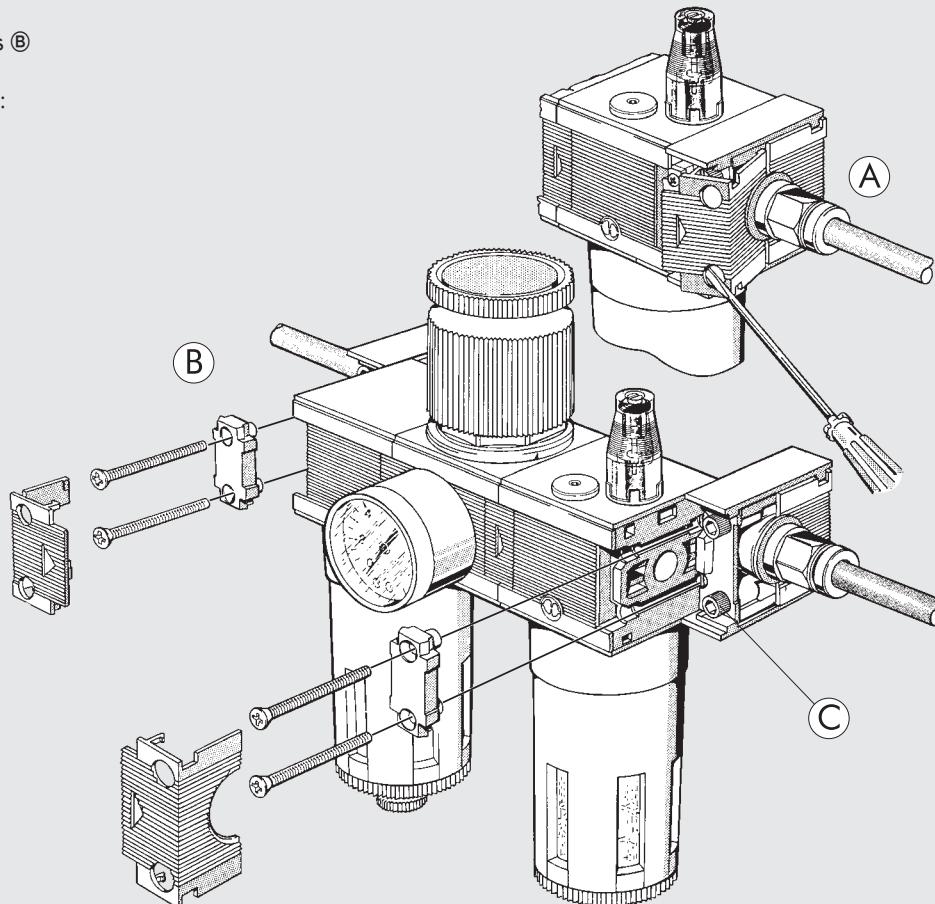

Assemble the unit so that the air flows in the direction marked by the arrows.

## DISASSEMBLING THE UNIT – WALL FIXING

How to disassemble Skillair® end plates:

- Remove the plate A.
- Unscrew the screws and remove the cams B to disassemble the unit.
- Screws to fix the end plates to the wall C:
  - Series 100: N. 8-32 unc x 2
  - Series 200: N. 10-24 unc x 2.36
  - Series 300: N. 10-24 unc x 2.75
  - Series 400: N. 1/4-20 unc x 4.33

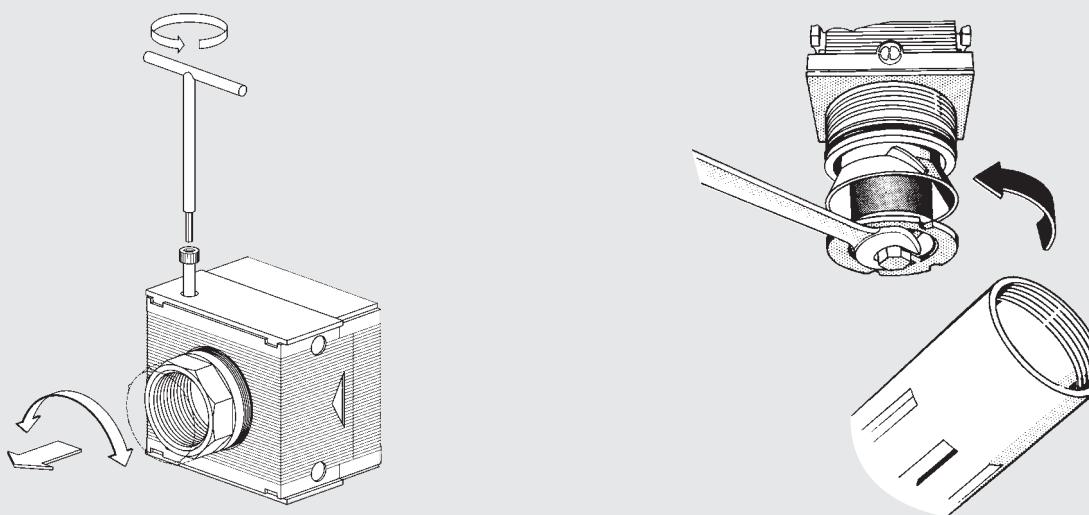

## Skillair® 400 - ROTARY SLIDING JOINT

The series 400 comes with a patented system with a rotary sliding end joint to allow the unit to be adapted to the pipe cutting distance. For correct assembly and disassembly, loosen the screw in the end plate before screwing in or unscrewing the bush.

## CLEANING AND/OR REPLACING THE FILTER ELEMENTS

**Before unscrewing the bowl to replace the filter elements, check that the line is no longer pressurized.**

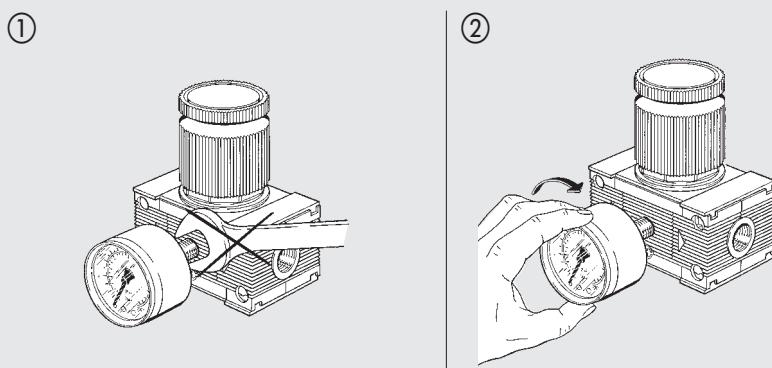

Replace as shown in the diagram.

## GENERAL RULES FOR USE AND MAINTENANCE

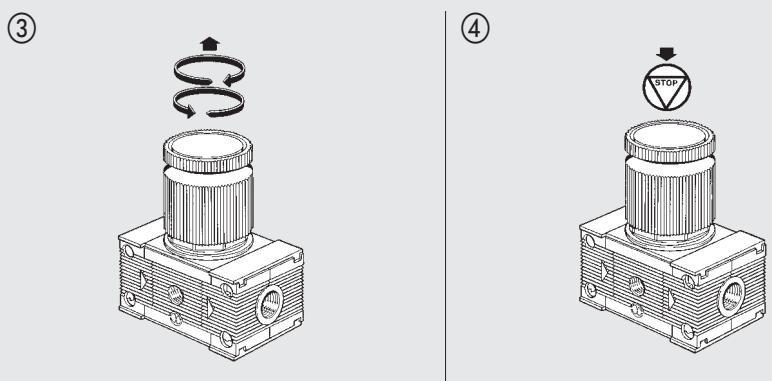

### MOUNTING THE PRESSURE GAUGE

- ① Do not use a spanner.
- ② The gauge must be mounted by hand.  
Use liquid sealants only.  
Do not use Teflon.

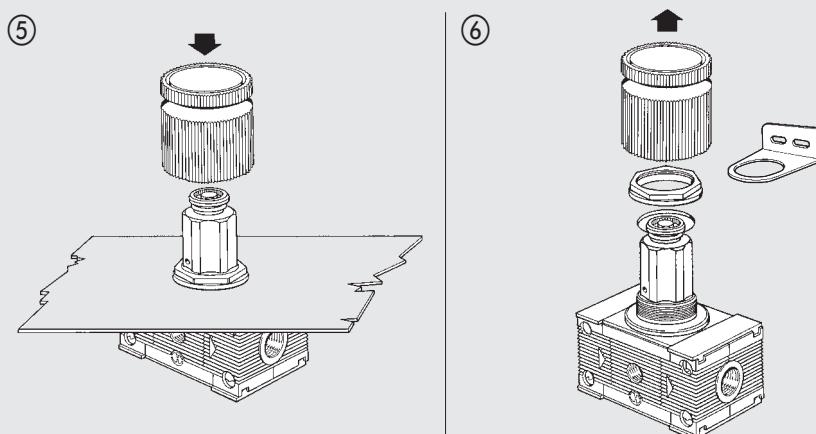

### SETTING THE PRESSURE

- ③ N.B.: the pressure in standard regulators must always be set upwards.  
Before setting the pressure, check that the knob is raised.
- ④ When the required pressure has been reached, press the knob downwards.

### MOUNTING THE REGULATOR AND FILTER-REGULATOR

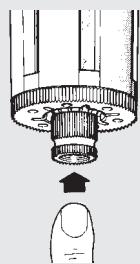

- ⑤ Panel mounting: remove the knob and lock the regulator with the ring nut.
- ⑥ Wall mounting: use a suitable bracket (see Skillair® accessories).

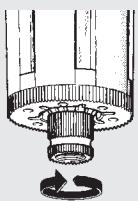

## SEMI-AUTO CONDENSATE DRAIN FOR FILTER, FILTER-REGULATOR AND DEPURATOR

The semi-auto condensate drain is the normally open type. When there is pressure in the bowl, the drain closes. When there is no pressure in the bowl, it opens and the condensate drains out.

If necessary, it is possible to drain the condensate whilst the bowl is pressurised. The simple manual operation of "pushing up the valve" will allow the condensate to drain.

When rotating the button clockwise, the valve becomes in locked position, and can only work when the button is returned to the central position.

The job of the filter is to remove any solid or liquid impurities from the air generated by the compressor.

Incoming air is rotated by the centrifuge unit. The heaviest liquid and solid particles are projected against the walls of the container and forced to adhere to it. As they accumulate they form drops that deposit on the bottom by gravity. The remaining solid particles are held back by the porous element depending on the filtering threshold.

The condensate accumulation area is kept still to prevent previously deposited impurities from being re-circulated.

The accumulated condensate is drained out through the drain - automatically when there is no pressure in the filter, or by hand pressing the button.

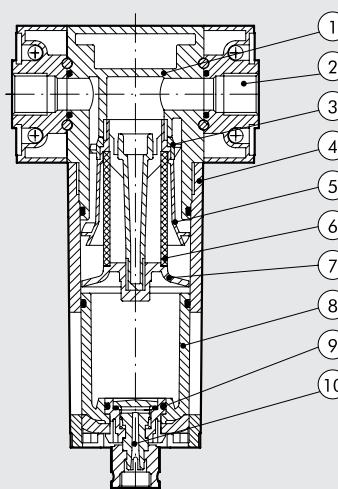

An automatic drain is available. It automatically eliminates condensate from the container whenever necessary, whatever the pressure.

## COMPONENTS FIL 100 - 200 - 300

- ① Technopolymer body
- ② Zamak end plate
- ③ Technopolymer centrifuge
- ④ Bowl: technopolymer for FIL 100 and FIL 200, metal for FIL 300
- ⑤ Technopolymer baffle
- ⑥ Sintered HDPE filter cartridge
- ⑦ Technopolymer screen
- ⑧ Clear technopolymer glass
- ⑨ NBR gaskets
- ⑩ Drain (RMSA)

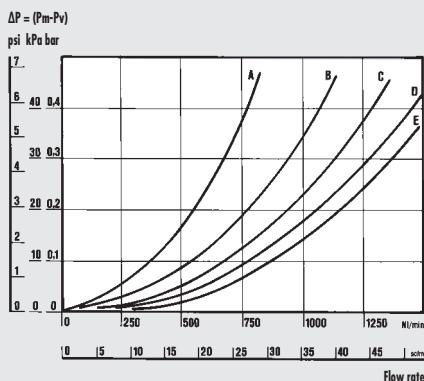

## COMPONENTS FIL 400

- ① Aluminium body
- ② Aluminium end plate
- ③ OT58 brass retaining ring
- ④ OT58 threaded bush, axial adjustment
- ⑤ Technopolymer centrifuge
- ⑥ Aluminium bowl
- ⑦ Sintered bronze filter cartridge
- ⑧ Aluminium screen
- ⑨ Clear technopolymer glass
- ⑩ Technopolymer plug
- ⑪ Drain (RMSA)
- ⑫ NBR gaskets

The role of the depurator is to separate the liquid and solid particles contained in the compressed air with a high degree of efficiency. This separation is carried out using a special filtering element called a "coalescence cartridge".

## HOW THE COALESCENCE CARTRIDGE WORKS

Air from the mains – full of impurities – flows into the coalescence cartridge and then passes through the crossed micro-fibres that make up the cartridge. During this movement the liquid particles come into contact with the crossed micro-fibres and adhere to them. Due to the air pressure and gravity they join up with other micro-drops at each cross-over point and gradually increase in volume, leading to the physical phenomenon called coalescence. When they stop moving, the drops deposit on the outside of the cartridge, from which they detach and drop to the bottom.

Since the volume of liquid leaving the cartridge is exactly the same as the drops arriving, the coalescence cartridge ought to work indefinitely. Solid particles are caught with the same efficiency but, unlike drops, they are not drained out and clog the cartridge.

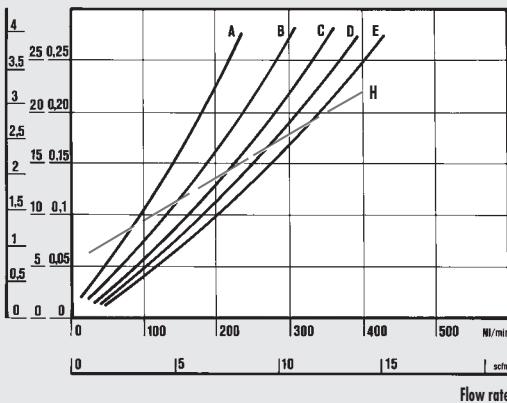

To get round this problem, it is necessary to mount a 5 µm pre-filter before the fine oil filter to separate the solid particles first.

# Skillair® REGULATORS

UNITS

Skillair® REGULATORS

Each system served by the air supply mains (e.g. actuators and general appliances) requires its own constant operating pressure. It is necessary to use a regulator to regulate the pressure within a set range by means of regulating springs, with the pressure never exceeding the mains pressure.

The new Skillair® regulator uses a rolling diaphragm which gives a much better performance than the flat version.

Advantages of this system:

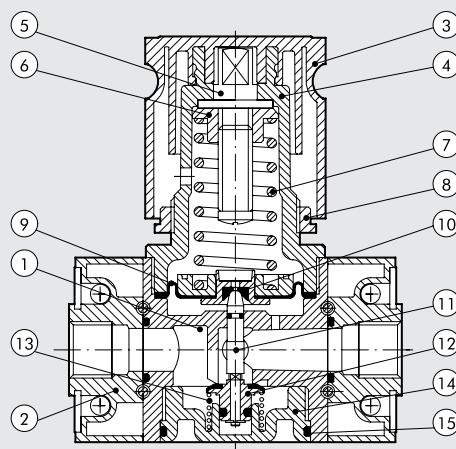

- Increased stroke, increased valve opening and hence higher flow rate.
- Decreased dynamic and inrush friction; prompter, more sensitive operation.
- Reduced working stress and hence longer life allowing the use of thinner diaphragms (0.017 inch versus 0.03÷0.05 inch for a flat one) which increases regulator sensitivity and prompt action.
- Increased accuracy in maintaining the set pressure with both variable flow rates and different feed pressures.
- Downstream overpressures relieved quickly.

Mounting position		In any position											
Fluid		Filtered lubricated or unlubricated compressed air. Lubrication, if used, must be continuous.											
Notes on use		The regulator pressure must always be set upwards.											
		For increased sensitivity, use a pressure regulator with a rated pressure as close as possible to the required value.											
		Do not take air from pressure gauge ports.											
		*Supplied without a pilot regulator.											

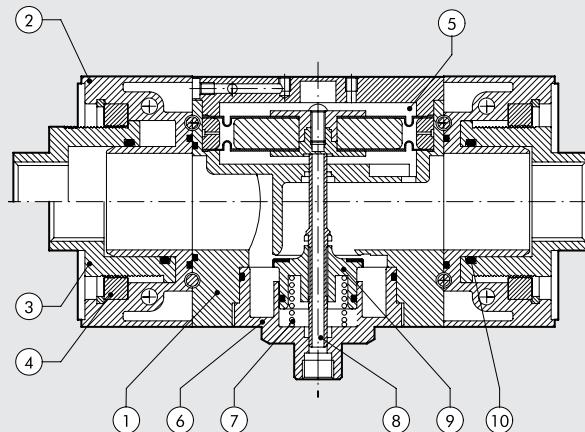

## COMPONENTS REG 100 - 200 - 300

- ① Technopolymer body
- ② Zamak end plate
- ③ Technopolymer knob
- ④ Technopolymer bell
- ⑤ OT58 brass adjusting screw
- ⑥ OT58 brass scroll
- ⑦ Steel adjusting spring
- ⑧ Technopolymer ring nut
- ⑨ Rolling diaphragm
- ⑩ NBR relieving gaskets
- ⑪ OT58 brass stem
- ⑫ Valve with NBR vulcanized gasket
- ⑬ Stainless steel valve spring
- ⑭ Technopolymer plug
- ⑮ NBR gaskets

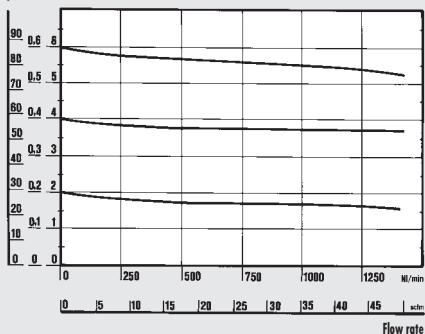

**COMPONENTS REG 400 PILOT OPERATED**

- ① Aluminium body
- ② Aluminium end plate
- ③ OT58 brass threaded bush, axial adjustment
- ④ OT58 brass retaining ring
- ⑤ Rolling diaphragm
- ⑥ OT58 brass plug
- ⑦ Stainless steel valve spring
- ⑧ OT58 brass stem with air relief hole
- ⑨ Valve with NBR vulcanized gasket
- ⑩ NBR gaskets

**FLOW CHARTS**

## INSTRUCTIONS FOR USE REG 400

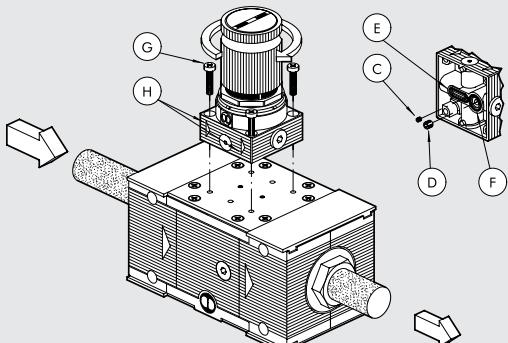

①

## REMOTE PILOT

- Fit the A7 M5 plug into the threaded hole ② (close to the entrance).
- Fit the M5 fitting into the threaded hole ④ as close to the entrance as possible.
- Connect the downstream circuit of the selected pilot operated regulator to the input ⑤ (R1 fitting).
- Set the required pressure on the pilot operated regulator.

②

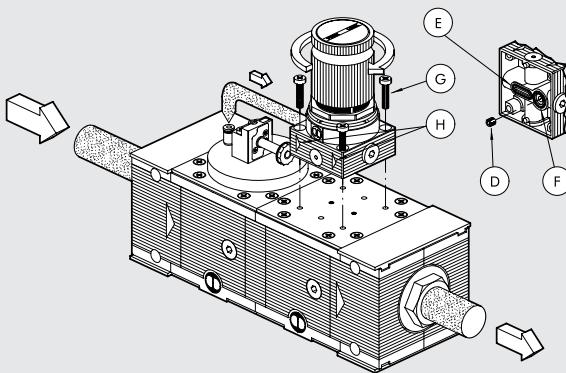

## DIRECT PILOT WITH Skillair® PILOT OPERATED REGULATOR

- Remove the pins ⑥ and ⑦ under the pilot operated regulator.
- Check that the two gaskets ⑧ and ⑨ under the pilot are in place.
- Fix the pilot operated regulator to the base of the regulator using the self-threading screws ⑩. Make sure the arrows ⑪ point in the same direction as the arrows in relief under the base of the regulator.

## INSTRUCTIONS FOR USE REG 400

(3)

### PILOT REGULATOR FOLLOW-UP LINK

This is used when the regulator is mounted downstream of a V3V valve or an APR.

The air can be bled from the V3V or APR valves instead of from the regulator relieving system.

- Remove only the stud pin marked with a letter **D** under the pilot regulator.
- Check the two gaskets under the pilot marked **E** and **F**.
- Secure the pilot regulator to the regulator base with the self-tapping screws marked with a letter **G**. Making sure the arrows marked **H** point in the same direction as the arrows in relief under the regulator base.
- Remove the A7 M5 plug from the V3V or APR plate and remount the fitting.
- Connect the pilot regulator supply to the fitting.

Several of these Skillair® regulators can be mounted in series, all fed by the same pressure. They can give different set pressures, each independent of the previous regulator.

Operating compressed air can be taken from the pressure gauge ports (G 1/8").

# Skillair® PILOT REGULATOR

METAL  
WORK®  
PNEUMATIC

The pilot regulator is used when great accuracy is required in maintaining the set pressure under changing operating conditions.

It is ideal for use as:

- a precision regulator for flow rates < 3.5 scfm.
  - a pilot in general - typically for large size regulators (see REG 400).
- The system's high operating accuracy and low hysteresis are determined by the virtually total lack of friction.  
The presence of a slight air leak is necessary for the regulator to operate properly - it is not a malfunction. It is advisable to use filtered air.

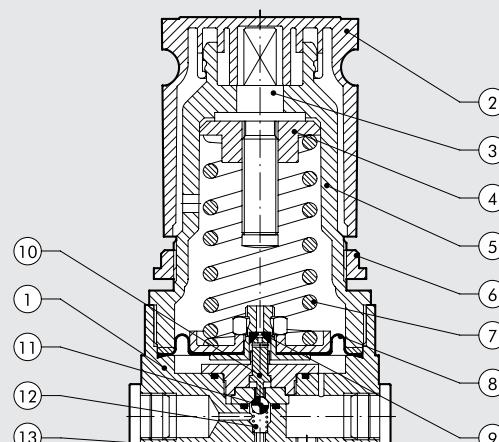

## TECHNICAL DATA

# Skillair® FILTER REGULATOR

## UNITS

## Skillair® FILTER REGULATOR

This device combines a filter and a pressure regulator in a single unit. It has the dual function of filtering and regulating air from the compressor. As the filter regulator is made up of the same elements as the regulator and the filter, the performance is the same.

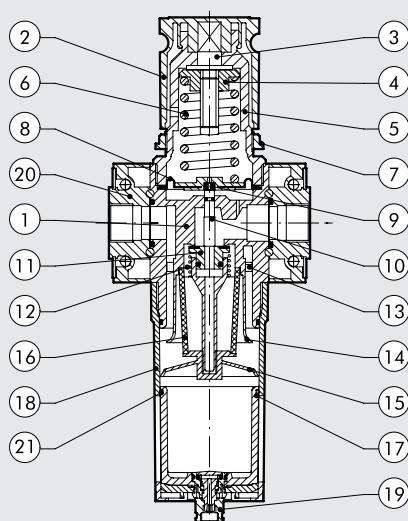

- High flow rates with low load loss.
- Special rolling diaphragm - higher flow rate, greater stability, improved sensitivity.
- Rapid relief of downstream overpressures.
- Stability of the regulated pressure as the mains pressure fluctuates.
- Maximum degree of condensate separation.
- 360° condensate level display.
- Condensate drain with manual/semi-automatic or automatic function.

The pneumatic lubricator is the simplest way of properly lubricating actuators connected to a circuit.

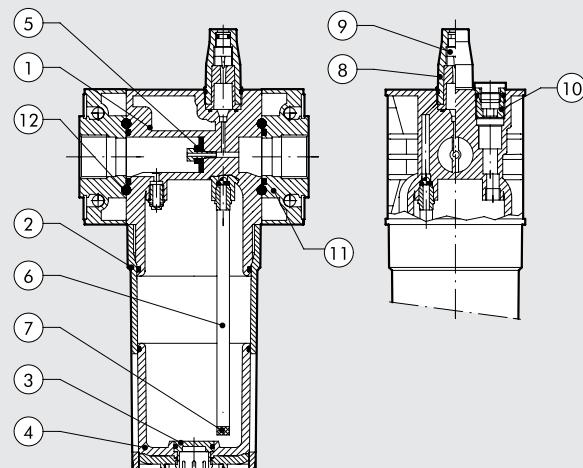

As air flows from the mains through the lubricator, it encounters the diaphragm which obstructs the flow and the air is forced through the Venturi tube. The inside of the Venturi tube is connected to the inspection dome, which connects with the bowl via a tube with a regulating needle in between. The drop in pressure caused by the Venturi tube sucks up air through the dome, the tube and lastly into the bowl containing oil. The quantity of oil controlled by the regulating needle then flows back from the bowl to the circuit.

Mounting position				Vertical								
Fluid				Filtered compressed air								
Recommended oils				ISO and UNI FD22 (Energol HPL to Spinoresso to Mobil DTE to Tellus Oil).								
Notes on use				Install the lubricator as close as possible to the point of use. Fill the lubricator bowl with oil before pressurizing the system.								
				Do not use cleaning oils, brake fluid oils or solvents in general.								
				For the best lubrication results, set the drip rate to one drop per 10.6-21.2 scfm.								

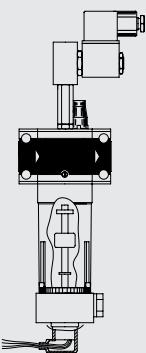

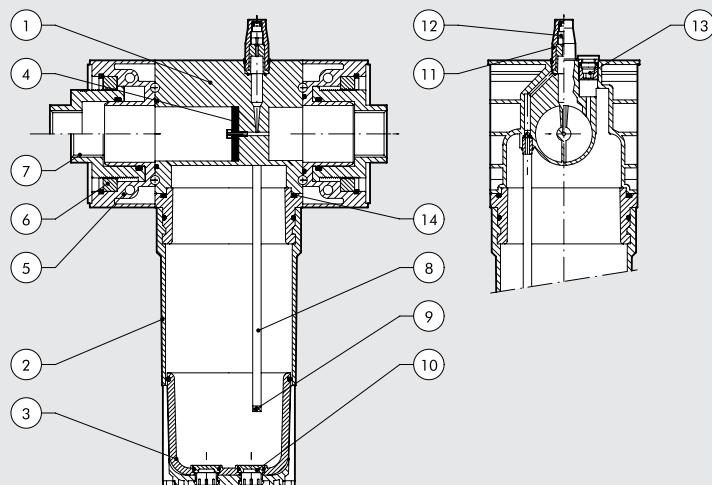

## COMPONENTS LUB 100 - LUB 200 - LUB 300

- ① Technopolymer body
- ② Bowl: technopolymer for LUB 100 and 200, metal for LUB 300
- ③ Technopolymer plug
- ④ Clear technopolymer glass
- ⑤ NBR Venturi tube diaphragm
- ⑥ Rilsan® oil suction tube
- ⑦ Filter
- ⑧ Clear technopolymer inspection dome
- ⑨ OT58 brass oil flow regulating needle
- ⑩ OT58 brass oil filling plug
- ⑪ Zamak end plate
- ⑫ NBR gaskets

## COMPONENTS LUB 400

- ① Aluminium body
- ② Aluminium bowl
- ③ Clear technopolymer glass
- ④ NBR Venturi tube diaphragm
- ⑤ Aluminium end plate
- ⑥ OT58 brass retaining ring
- ⑦ OT48 brass threaded bush with axial adjustment
- ⑧ Rilsan® oil suction pipe
- ⑨ Filter
- ⑩ Technopolymer plug
- ⑪ Clear technopolymer inspection dome
- ⑫ OT58 brass oil flow regulating needle
- ⑬ OT58 brass oil filling plug
- ⑭ NBR gaskets

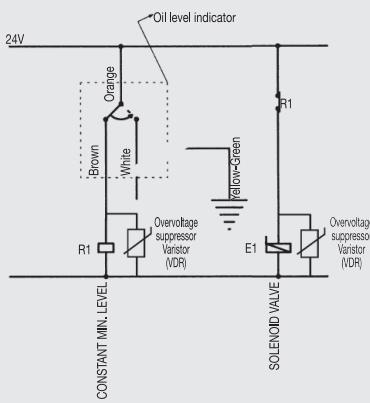

## DEPRESSION FILLING WITH MINIMUM LEVEL (ML CD AUTOMATIC)

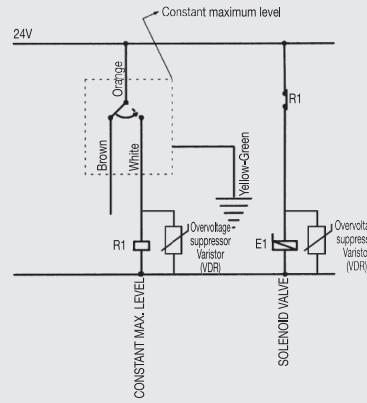

Available in sizes 300 and 400, this lubricator is controlled by a solenoid valve (2/2 NC minimum bore 3) situated on the lubricator body.

It reduces pressure inside the bowl allow it to be filled with oil taken from a tank at ambient pressure, which can be located in a lower position than the lubricator (max. difference in height 78.8 inch). The electric indicator inside the bowl sends an electric signal used to activate the valve. When the oil reaches the maximum level, another signal deactivates the valve. In this case, the lubricator system operates with the oil level between minimum and maximum. If it is necessary to keep the oil level in the bowl constant, only one of the two signals can be used. Pressure range 43.5 to 145 psi. Connect the oil tank to the BSPP 1/4 fitting on the bowl.

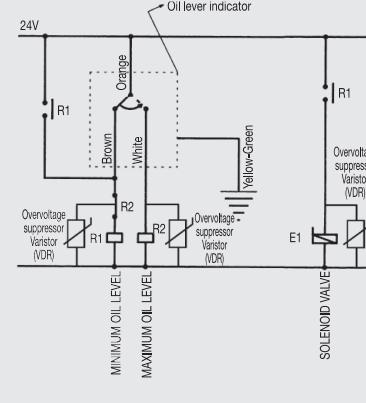

## Constant minimum level

## Constant maximum level

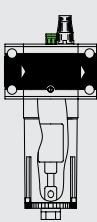

## Oil level between maximum and minimum

## FILLING BY DEPRESSION (CD MANUAL)

Available in all sizes. It is operated by means of a button on the lubricator body. The pressure inside the bowl drops to allow it to be filled with oil taken from a tank at ambient pressure, which can be located in a lower position than the lubricator (max. difference in height 78.8 inch). Oil filling stops when the level of oil raises the float and shuts off a specific valve. Important – The SK4 lubricator is filled with oil by hand. Filling must stop when the oil level is visible through the spy-hole in the bowl release lever. Pressure range 43.5 to 145 psi.. Lubrication is discontinued during filling. Connect the oil tank to the BSPP 1/4 fitting below the bowl.

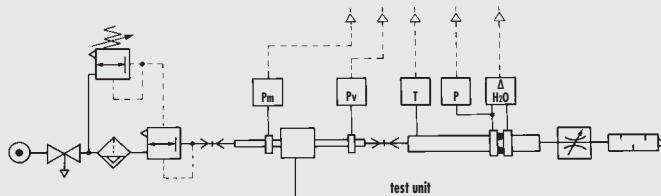

## FLOW CHARTS

**Department  
of Mechanics**

Turin Polytechnic

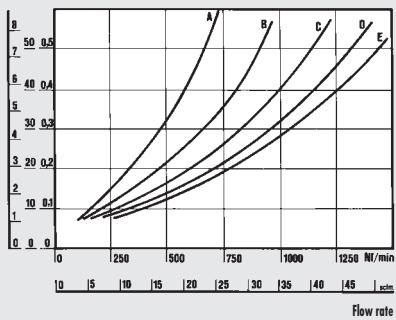

• Flow tests carried out at the Department of Mechanics, Turin Polytechnic, using the computerized test bench following CETOP RP50R recommendations (ISO DIS 6358-2-approved) with ISO 5167 diaphragm gauge.

(A) = 2 bar - 0.2 MPa - 29 psi      (D) = 8 bar - 0.8 MPa - 116 psi  
 (B) = 4 bar - 0.4 MPa - 58 psi      (E) = 10 bar - 1 MPa - 145 psi  
 (C) = 6 bar - 0.6 MPa - 87 psi

# Skillair® SHUT-OFF VALVE

METAL  
WORK®  
PNEUMATIC

The job of this valve is to make the circuit independent from the air supply. It is basically a three-way valve. In the closed position, it cuts off the air supply and discharges the downstream circuit at the same time, which means it is particularly useful during servicing operations. The hand-operated version can be padlocked to lock the knob in a closed position so that it can only be opened by someone with the right key. An interlocked version is available for low pressure operation.

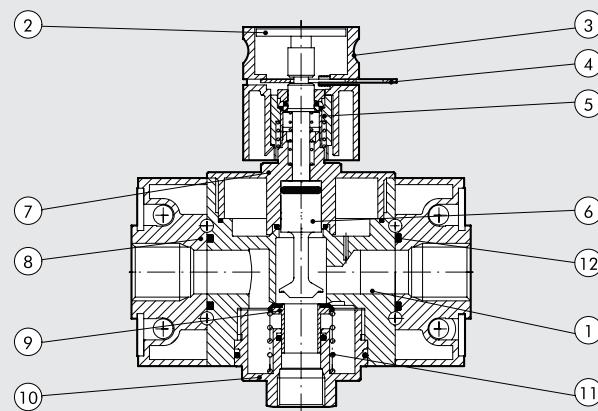

**N.B.:** With size 400, when the V3V is mounted upstream of the regulator, the pilot regulator must be piloted at a pressure taken upstream of the V3V, otherwise when the system is relieved, most of the air downstream will be relieved by the regulator and not the V3V relief port.  
For connecting instruction see page 2-89.

# Skillair® PROGRESSIVE START VALVE

## UNITS

## Skillair® PROGRESSIVE START VALVE

The 2/2 progressive valve comes in two versions, with solenoid or pneumatic actuation.

**STD progressive start valve:** a differential balanced valve automatically opens the air port fully when the downstream pressure is about 50% of the upstream pressure.

**Progressive start valve with pneumatic or solenoid actuation:** without a pilot, the upstream air flows downstream through the regulation needle.

When an external or pneumatic solenoid signal is generated, the valve opens the main port to create full flow. It does not relieve the downstream circuit.

**NOTES**

# Skillair® PROGRESSIVE STARTER

The job of the progressive starter is to feed air into the circuit gradually with controlled flow. It comes in two versions with solenoid or pneumatic actuation. Both control signals cause the valve to open, which allows the air controlled by the flow regulator to flow slowly towards the downstream circuit. In the APR, when the pressure in the downstream circuit reaches 50%-60% of the upstream pressure, the valve opens the main inlet duct connecting. The time elapsing between starting and opening the valve can be adjusted via the built-in flow regulator. If it is necessary to relieve the downstream circuit quickly, merely operate the control valve which cuts off air flow in the pipe. This closes the valve and starts relieving the downstream circuit. The progressive starter acts both as an actuator positioner, which eliminates the risk of sudden kickback, and as a valve.

**N.B.** With size 400, when the APR is mounted upstream of the regulator, the pilot regulator must be piloted at a pressure taken upstream of the APR, otherwise when the system is relieved, most of the air downstream will be relieved by the regulator and not the APR relief port.

relieved by the regulator and not the AFR. For connecting instruction see page 2-89.

# Skillair® AIR TAKE-OFF

## UNITS

## Skillair® AIR TAKE-OFF

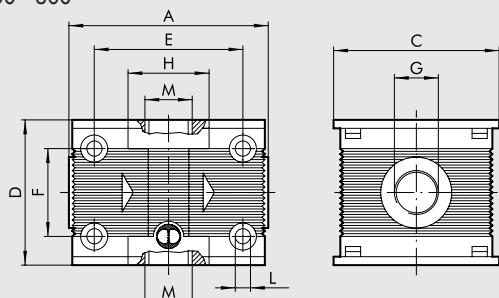

The air take-off takes air from the Skillair® FRL unit irrespective of the assembly position. It is necessary when air needs to be taken from the FRL unit at any stage of the treatment (normal, filtered and regulated, lubricated, etc.). If used separately from the FRL unit, which is infinitely modular, it acts as a distributor allowing air take-off through the threaded ports.

Skillair® pressure switches feature a high degree of miniaturisation and a modern attractive design. As they are extremely modular, the Skillair® series can be installed facing up or down.

They come ready assembled with a 78.8 inch cable or an M8 connector with a 11.8 inch cable.

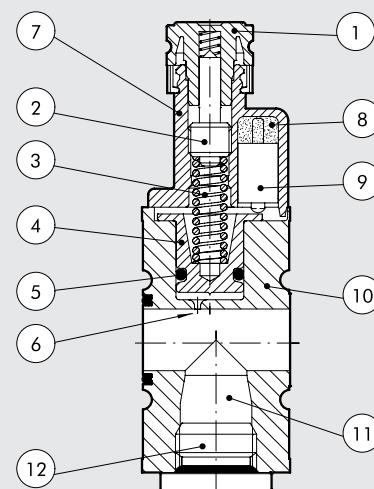

The contact is the switching type, which means it can be normally open or normally closed. It can be regulated via a knurled push-lock handle. On the side opposite the regulation handle is a threaded air inlet port that can be used by removing the threaded plug.

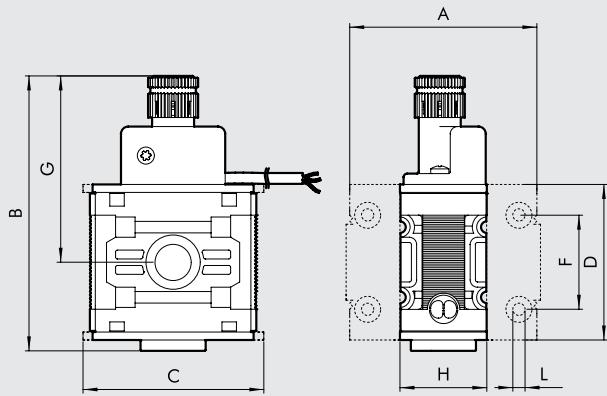

TECHNICAL DATA		PS 100	PS 200	PS 300
Adjustable pressure interval	psi		7.25 to 145	
Hysteresis (not adjustable)	psi		5.8 to 11.6 (See diagram)

Maximum current	A		2	
Maximum voltage	V		250	
Outside diameter of cable	in		0.19	
Number of wires and cross section			3 x 0.5 mm <sup>2</sup>	
Contacts			Normally-Open (NO) and Normally-Closed (NC)	
Protection			IP65	
Number of switchings			5 x 10 <sup>6</sup>	
Fluid			Filtered lubricated or unlubricated compressed air. Lubrication, if used, must be continuous.	
Mounting position			In any position.	
Weight	pounds	0.35	0.40	0.55

## COMPONENTS

- ① Technopolymer adjusting push-lock handle
- ② Brass adjusting screw
- ③ Steel piston spring
- ④ Brass piston
- ⑤ NBR gasket
- ⑥ Choke to reduce peaks in pressure
- ⑦ Technopolymer pressure switch body
- ⑧ Resin finish for IP65
- ⑨ Electrical contact
- ⑩ Technopolymer body
- ⑪ Supplementary air inlet port
- ⑫ A7 plug

## ACCESSORIES

## SECURITY KNOB

Code	Description
9200703	Acc. security knob

**NOTE:** Pull outwards to remove the knob from the pressure switch on the unit. Insert the security knob and regulate the pressure switch. Then press the handle firmly to lock it in position. If the pressure switch needs to be reset, remove the security knob by forcing it laterally with a screwdriver.

# Skillair® SUB-BASE AND ADAPTER BASE

METAL  
WORK®  
PNEUMATIC

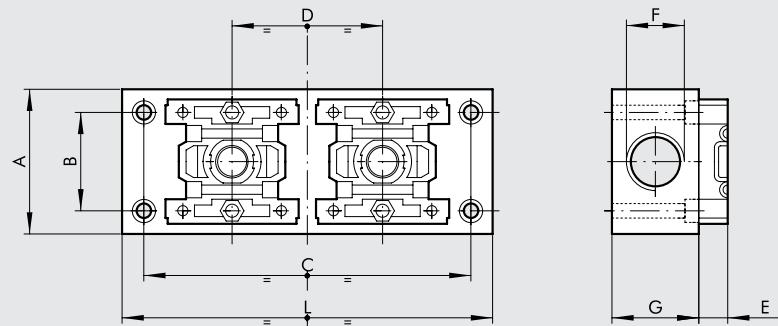

The adapter base is used to adapt the Skillair® FRL system to various assemblies without affecting modularity or servicing.

If you use the universal adapter base plus the intermediate plate, you can assemble several elements of different sizes.

Notes on use		The maximum inlet pressure for the version with RA automatic condensate drainage must not exceed 145 psi. Do not take air from pressure gauge ports.													

## KEY TO CODES

FR+L	100	1/4 THREADED PORT	20 DEGREE OF FILTRATION	0-120 SETTING RANGE	RMSA TYPE OF CONDEN- SATION RANGE
FR+L	100	1/4 = 1/4 NPT 3/8 = 3/8 NPT	5 = 5 µm (200 microinch) 20 = 20 µm (790 microinch) 50 = 50 µm (2000 microinch)	0-120 = 0 to 120 psi	RMSA SAC
	200	1/4 = 1/4 NPT 3/8 = 3/8 NPT 1/2 = 1/2 NPT		0-180 = 0 to 180 psi	RMSA SAC RA
	300	1/2 = 1/2 NPT 3/4 = 3/4 NPT 1 = 1 NPT			RMSA RA

RMSA: drain with manual condensate discharge and automatic discharge at zero pressure  
 RA: automatic drain with condensate discharge, independent of pressure and flow rate.  
 (for size 200, 300)  
 SAC: automatic drain with condensate discharge.  
 Operates by depression – requires variable air take-offs.  
 (for size 100 and 200)

# GENERAL TECHNICAL DATA Newdeal

## UNITS

## GENERAL TECHNICAL DATA New deal

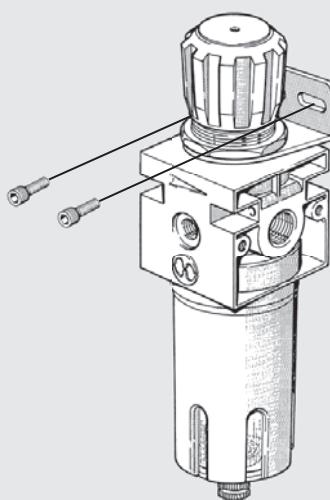

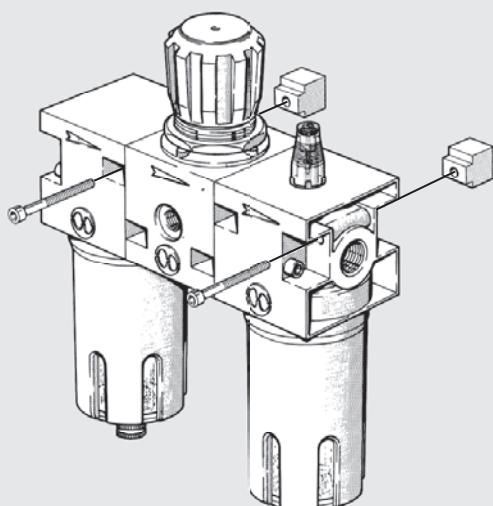

Newdeal is the forerunner of all air treatment units by Metal Work. The entire range is top quality, heavy-duty and reliable. These units are designed for use at high pressures\* and in applications where the temperature and quality of the ambient area are critical.

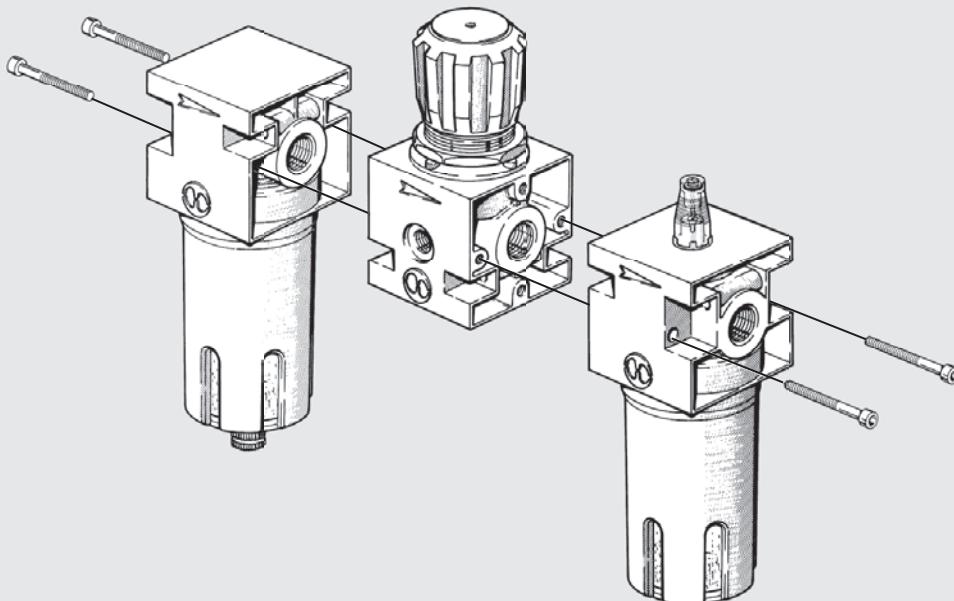

\*For further details, refer to the Specification for the item in question.

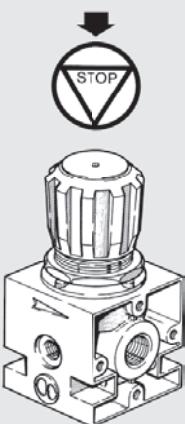

TECHNICAL DATA		ND 1/4"	ND 3/8"	ND 1/2"	ND 3/4"	ND 1"
Threaded port	NPT	1/4"	3/8"	1/2"	3/4"	1"
Degree of filtration	µm			4 - 20 - 50		
Degree of purification	µm			99.97% at 0.01		
Setting range	bar			0 to 2 - 0 to 4 - 0 to 8 - 0 to 12		
Max. input pressure	MPa				1.8	
	bar				18	
	psi				261	
Flow rate at 6.3 bar (0.63 MPa to 91 psi) ΔP 0.5 bar (0.05 MPa to 7.25 psi)	Nl/min scfm			from 200 to 12000 from 7 to 423		
Fluid				Lubricated or unlubricated compressed air		
Temperature range at 1 MPa; 10 bar; 145 psi	°C °F			-10 to +50 14 to 122		
Elements comprising the range				Filter, Depurator, Regulator, Pilot operated Regulator, In-series Regulator, Filter-regulator, Lubricator, Circuit Shut-off Valve		
Compatibility with oils				Please refer to page 5-4 of the technical documentation		

## WALL MOUNTING

**GENERAL RULES - USE AND MAINTENANCE**

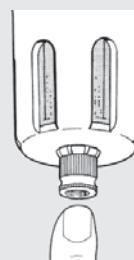

The knob can be locked so that the set pressure cannot be altered.

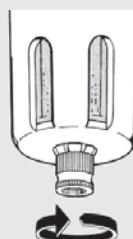

The air pressure must always be set upwards.

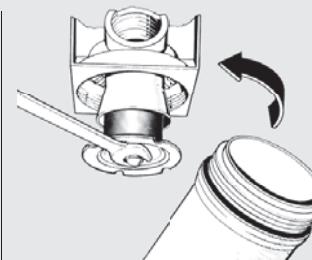

With the knob in the centre position, the drain is semi-automatic. The drain operates when the bowl is pressurized and closes when it is not.

Press the button to drain condensate when the bowl is pressurized.

Turn the knob anticlockwise to close the valve with bowl pressurized or not pressurized.

To clean or replace the filter element unscrew the screen of the centrifuge assembly. Use a no. 3 compass spanner to unscrew the bowl.

# New deal FILTER

## UNITS

## New deal FILTER

Filter with different impurity filtration degrees.

- Metal bowl with external viewing
- Semi-automatic and condensate drainage

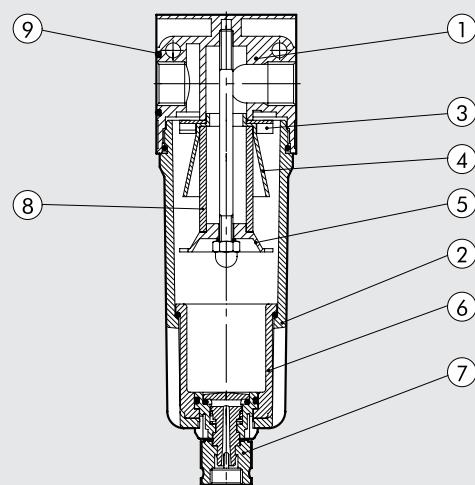

### TECHNICAL DATA

		FIL ND 1/4"	FIL ND 3/8"	FIL ND 1/2"	FIL ND 3/4"	FIL ND 1"

Bowl capacity	fluid ounce oz	0.34	1.52	1.52	5.75	5.75
Mounting position		Vertical	Vertical	Vertical	Vertical	Vertical
Drain		RMSA - SAC	RMSA - SAC - RA	RMSA - SAC - RA	RMSA - RA	RMSA - RA
RMSA: drain with manual condensate discharge and automatic discharge at zero pressure.						
RA: automatic drain with condensate discharge, independent of pressure and flow rate.						
SAC: automatic drain with condensate discharge.						
Operates by depression – requires variable air take-offs.						
Compressed air						
The maximum inlet pressure for the version with RA automatic condensate drainage must not exceed 145 psi.						

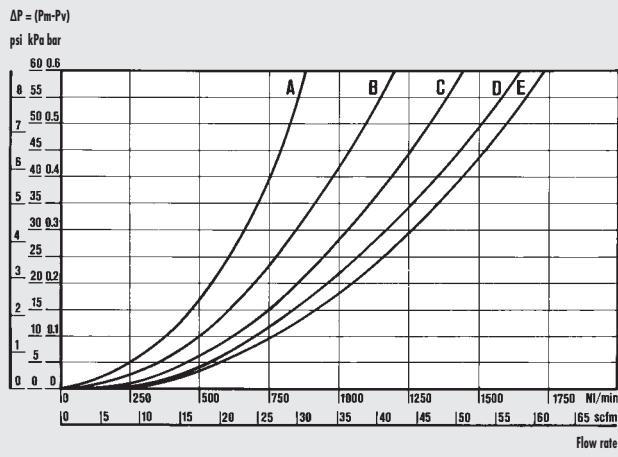

### COMPONENTS

- ① Zamak body
- ② Aluminium bowl
- ③ Technopolymer centrifuge
- ④ Technopolymer baffle plug
- ⑤ Technopolymer screen
- ⑥ Clear technopolymer bowl
- ⑦ Drain (RMSA)
- ⑧ HDPE bronze filter cartridge (1/4 - 3/8 - 1/2), sintered bronze (1")
- ⑨ NBR gaskets

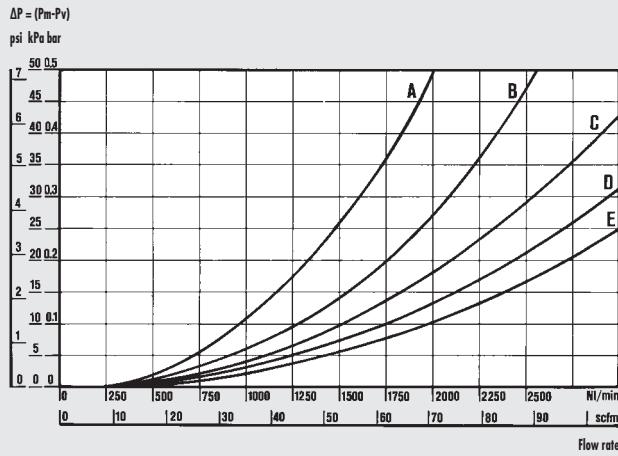

## FLOW CHARTS

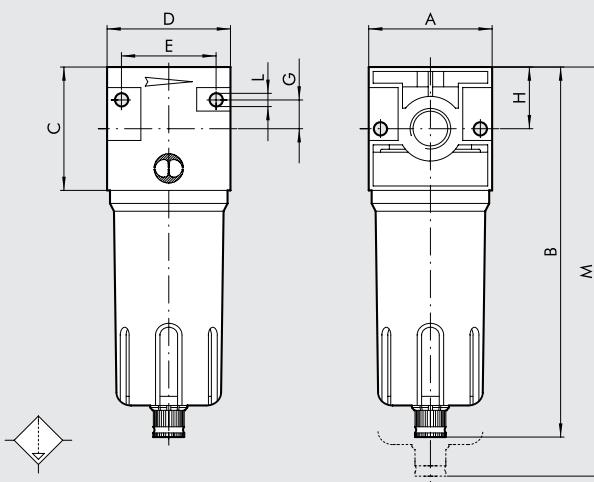

### FIL 1/4

### FIL 3/8 - 1/2

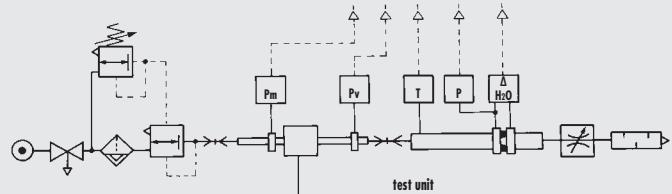

## DIMENSIONS

**Department  
of Mechanics**

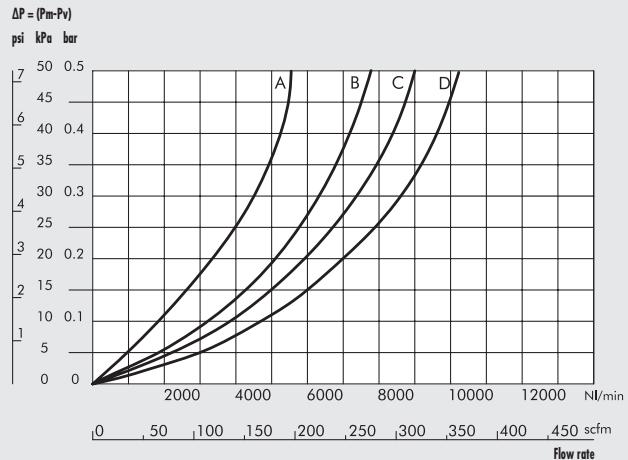

Turin Polytechnic

- Flow tests carried out at the Department of Mechanics, Turin Polytechnic, using the computerized test bench following CETOP RP50R recommendations (ISO DIS 6358-2-approved) with ISO 5167 diaphragm gauge.

$$\begin{aligned} (A) &= 2 \text{ bar} - 0.2 \text{ MPa} - 29 \text{ psi} & (D) &= 8 \text{ bar} - 0.8 \text{ MPa} - 116 \text{ psi} \\ (B) &= 4 \text{ bar} - 0.4 \text{ MPa} - 58 \text{ psi} & (E) &= 10 \text{ bar} - 1 \text{ MPa} - 145 \text{ psi} \\ (C) &= 6 \text{ bar} - 0.6 \text{ MPa} - 87 \text{ psi} \end{aligned}$$

## NOTES

# Newdeal DEPURATOR

METAL WORK PNEUMATIC

Oil-proof depurator with coalescing cartridge

- Metal bowl with external viewing
- Manual/semi-auto or automatic condensate drain

## TECHNICAL DATA

		DEP ND 3/8"	DEP ND 1/2"
Threaded port	NPT	3/8"	1/2"
Degree of depuration	µm	99.97% at 0.01	
Max. inlet pressure	MPa	1.8	
	bar	18	
	psi	261	
Maximum suggested flow rate	NI/min	please look at the flow rate curves	
Suggested flow rate at 87 psi	scfm	230	
Fluid	°C	8	Filtered air 4 µm
Max temperature at 1 MPa; 10 bar; 145 psi	°F	50	122
Weight	pounds	2	
Wall fixing screws	fluid ounce oz	N. 8-32 unc x 2.16	
Bowl capacity		1.52	
Mounting position		Vertical	
Drain		RMSA - SAC - RA	
Note on use		RMSA: drain with manual condensate discharge and automatic discharge at zero pressure. RA: automatic drain with condensate discharge, independent of pressure and flow rate. SAC: automatic drain with condensate discharge. Operates by depression – requires variable air take-offs.	
		It is advisable to mount a 4 µm filter upstream the depurator acting as a rough filter. <b>The maximum inlet pressure for the version with RA automatic condensate drainage must not exceed 145 psi.</b>	

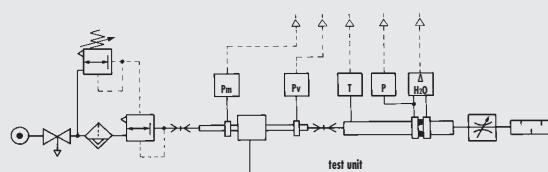

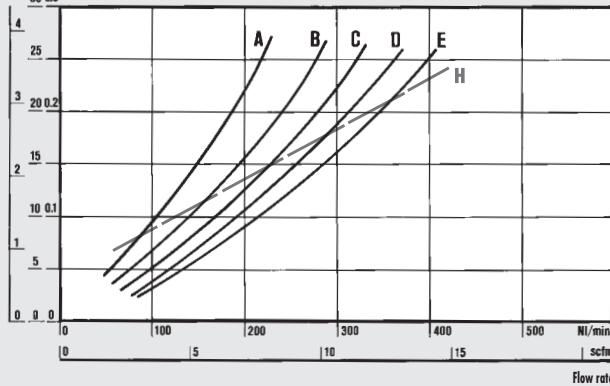

## FLOW CHARTS

D 3/8 - 1/2

$\Delta P = (P_m - P_v)$

psi KPa bar

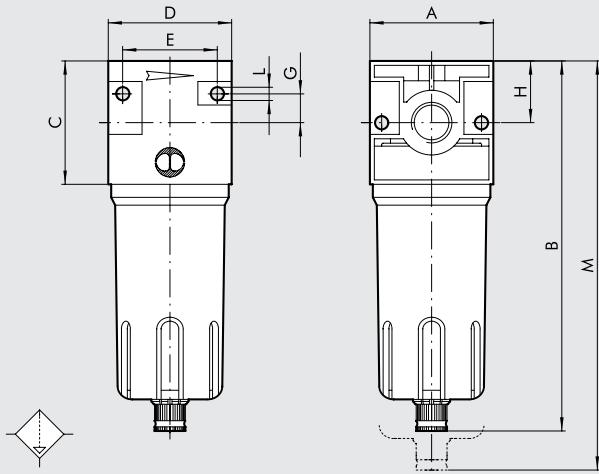

30 0.3

- Flow tests carried out at the Department of Mechanics, Turin Polytechnic, using the computerized test bench following CETOP RP50R recommendations (ISO DIS 6358-2-approved) with ISO 5167 diaphragm gauge.

## NOTES

# Newdeal REGULATOR

Highly reliable, heavy-duty piston-operated regulator.

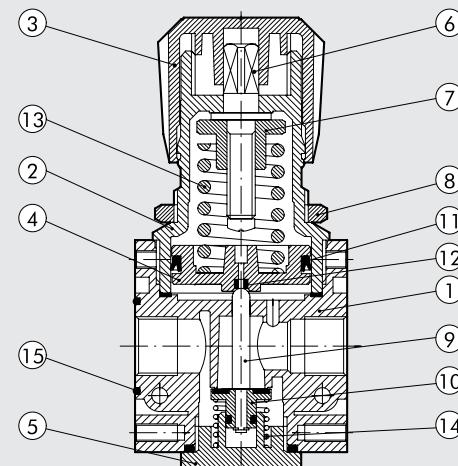

- Stability of the set pressure as the upstream pressure varies
- Standard overpressure blowoff valve
- Can be fixed to the wall using the holes in the sides of the body.

## NOTES

# Newdeal SHUT-OFF VALVE

Manually-operated circuit shut-off valve.

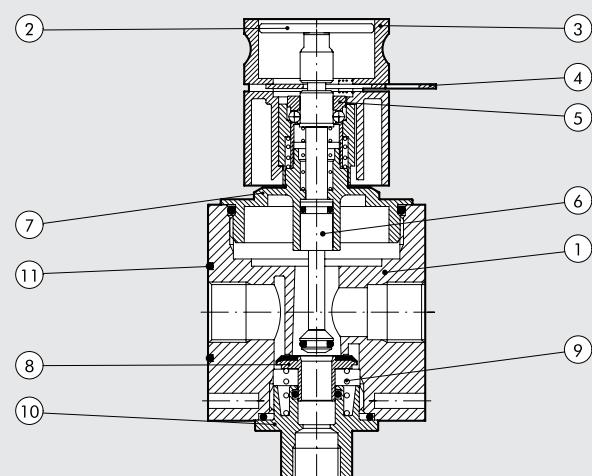

- Poppet seat system to ensure high flow rate
- Quick-actuation knob
- Possible triple locking
- The valve is actuated by pressing the actuation disk until it clicks.  
Press the knob downwards to relieve pressure. In this position you can extract the shim and fit a lock to avoid accidental operation.

## COMPONENTS

- ① Zamak body
- ② Actuation disk
- ③ Technopolymer knob
- ④ Stainless steel safety shim
- ⑤ Clutching unit
- ⑥ OT 58 brass rod
- ⑦ Upper OT 58 brass plug
- ⑧ V3V valve with NBR vulcanized gasket
- ⑨ Stainless steel valve compression spring
- ⑩ Lower OT58 brass plug
- ⑪ NBR gaskets

## ASSEMBLY DIAGRAM

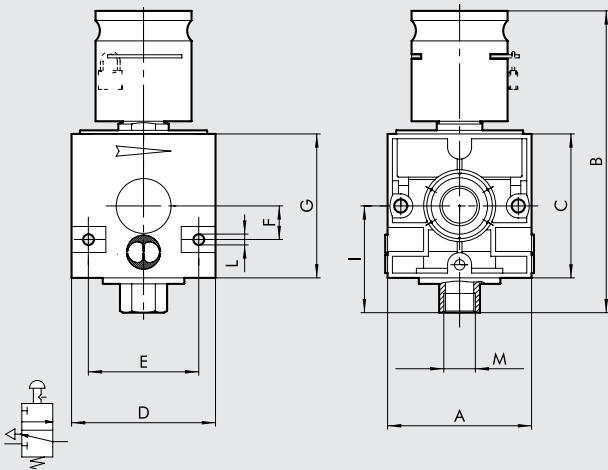

To assemble the V3V to the regulator filter 1/4", or depurator 3/8-1/2", use the adopter provided (see the assembly diagram at the left).

Adaptor V3V + FR 1/4" - code 9201001

Adaptor V3V + D 3/8" - code 9401001

Adaptor V3V + D 1/2" - code 9401002

## NOTES

# Newdeal AIR TAKE-OFF

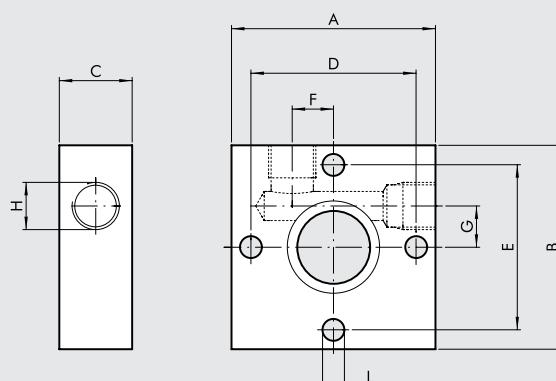

The air take-off has the job to take off the air from the Newdeal FRL unit irrespective of the position where it is assembled.

It is required whenever you need to take off air from the FRL unit at different stages of the treatment (normal, filtered, filtered regulated, lubricated, etc.)

# FIL+REG+LUB New deal

Highly reliable heavy-duty piston-operated FRL unit.

- Stability of the set pressure as the upstream pressure varies
- Metal bowl with external sight glass
- Semi-automatic and automatic condensate drain
- Lubrication proportional to flow rate
- Micrometric lubrication regulation
- Activation guaranteed with low flow rates

Refer to the sections on the single modules for a further description, components and other technical data.

# FR+LUB New deal

## UNITS

## FR+LUB New deal

Heavy duty and reliable piston-operated FR+L unit.

- Stability of the set pressure as the upstream pressure varies
- Metal bowl with external sight glass
- Semi-automatic and automatic condensate drain
- Quantity of lubricant proportioned to air flow
- Micrometric lubrication regulation
- Activation guaranteed with low flow rates

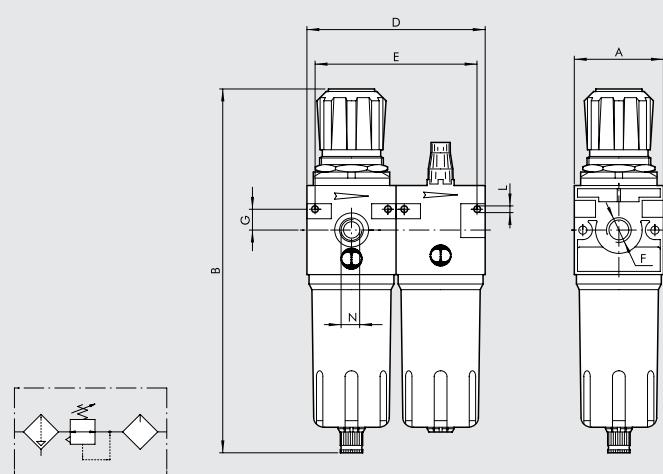

Refer to the sections on the single modules for a further description, components and other technical data.

# V3V+FR+LUB New deal

Highly reliable heavy-duty piston-operated FRFL unit.

- Stability of the set pressure as the upstream pressure varies
- Metal bowl with external sight glass
- Semi-automatic and automatic condensate drain
- Quantity of lubricant proportionate to the air flow
- Micrometric lubrication regulation
- Activation guaranteed at low air flows
- Quick filling and drainage of the downstream circuit with the V3V element

Refer to the sections on the single modules for a further description, components and other technical data.

# LEARNING ABOUT

## UNITS

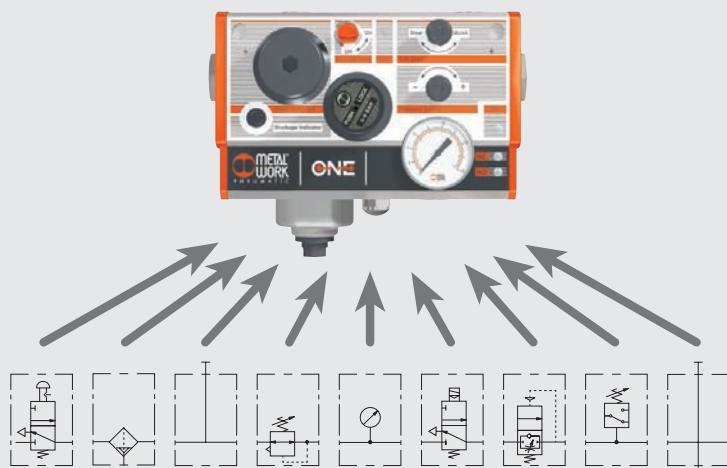

## ONE: LEARNING ABOUT

In the world of pneumatics, which is considered mature, it is rare to encounter completely new and different products. ONE a compressed air treatment unit with a high degree of integration, that encompassed numerous pneumatic functions. In fact, it contains so many innovations that a single patent is not enough to safeguard it against imitation – three separate patent applications have been registered with a total of 39 claims. This unit is so innovative that it won the international novelty award at Fluidtrans Compomac. ONE has a single high-performance valve on the main flow that handles all the functions from regulation to relief. It is controlled by a high-precision pilot regulator with controlled relief, in series with the manual on-off valve, the electric valve and the progressive actuator. Unification of the valve has led to a significant reduction in overall dimensions, enhanced capacity, precision and response speed.

### INTEGRATION

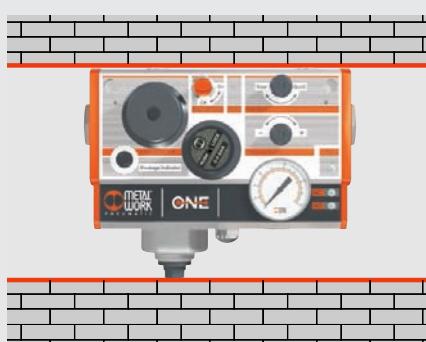

One single unit houses the threaded ports, filter, condensate drain, pressure regulator, shut-off valve, soft start valve, pressure switch and three supplementary air intakes.

### MINIATURISATION

Extremely reduced dimensions, considering the extra-high performance and flow rate reachable.

No clearance is required above and below it to make adjustments or change the filter or other components. The actual space occupied is thus further reduced.

It weighs slightly more than one kilo instead of the 8.8 to 17.6 pounds of conventional units.

## EASY ADJUSTMENTS AND LITTLE MAINTENANCE

The entire user interface is at the front, which means that everything is visible and easy to reach. All the adjustments are made using the push-lock knobs (no need for wrenches or screwdrivers), thus preventing accidental operations or manoeuvres.

## WHAT YOU CAN SEE FROM THE OUTSIDE

- ① Air intake, with swivel threaded port
- ② Fixing hole
- ③ Access to filter cartridge
- ④ Pressure regulation
- ⑤ Manual override (shut-off valve electrical)
- ⑥ Soft start valve regulation
- ⑦ Switching pressure regulation
- ⑧ Air outlet, with swivel threaded port
- ⑩ LED signalling unit ON
- ⑪ LED signalling pressure below the value set on pressure switch
- ⑫ LED signalling pressure over the value set on pressure switch
- ⑬ 5-pin M12x1 electrical connector
- ⑭ Pressure gauge
- ⑮ BSPP 1/4" air intake. Another regulated air intake and a filtered non-regulated air intake are situated on the top
- ⑯ Air exhaust with a BSPP 1/4" silencer
- ⑰ Condensate tank
- ⑱ Condensate drain
- ⑲ Clogged filter signal

## CONFIGURABILITY

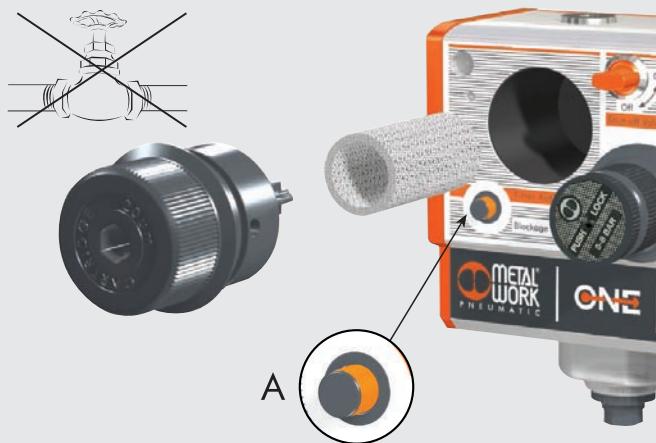

Considering that ONE is reduced in size but highly performing, and it can integrate tenths of functions, a single unit can cover the entire range of applications, with cut-clear advantages in terms of standardisation and reduction of the number of codes handled and goods in stock. With a single size there are thousands of different configurations. For example, there is choice between 1/4", 3/8", 1/2", 3/4" or 1" threaded ports, manual and/or electric on-off or progressive valves, etc. The customer decides the configuration he wants and creates the code, using the key-to-coding table shown below in this catalogue. He will receive the unit he wants marked with its code and the correct pneumatic diagram.

## THREADED PORTS

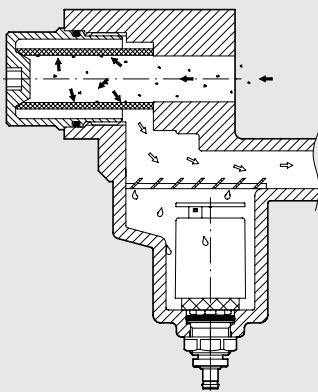

- The threaded ports at the air intake and outlet are the swivel type to facilitate coupling with the supply and delivery pipes. In this way, the unit can be mounted or removed without dismounting the pipes.
- A range of 5 different threads, 1/4", 3/8", 1/2", 3/4" and 1" is also available.
- The thread for the supply pipe may differ from that of the delivery one.

- If the filter gets so clogged up that it causes an excessive drop in pressure as the air passes through, the optical filter blockage indicator will project (see detail A) to indicate that the filter cartridge must be replaced.
- The cartridge can be replaced by unscrewing a plug at the front. This system is functional and, unlike conventional filters, does not require manoeuvring space below the unit.
- An automatic stop on-off valve is incorporated in the unit: when the filter plug is unscrewed, the valve closes automatically. This means there is not need to a tap upstream and there is no risk of the plug being ejected violently.

## CONDENSATE DRAIN

- The condensate drain is located downstream of the filter and thus uses cleaner air. This prevents the known problem of air leaks due to the deposit of dirt on the condensate discharge valve.
- You can request ONE with two types of condensate drain:
  - semi-automatic, type RMSA
  - automatic, of the floating type RA

## SINGLE AIR EXHAUST

The air in the circuit is relieved via one outlet situated below the unit and fitted with silencer. If you want to convey air relief to prevent the emission of polluted air into the atmosphere, you can replace the silencer and install a fitting. (a pipe with a diameter of at least 6 mm is recommended)

Next to the air outlet there is the condensate drain, which in the RA version conveys the draining by inserting the pipe having internal diameter 6 mm in the lower port.

## SUPPLEMENTARY PORTS

In addition to the main outlet, there are three supplementary air ports with a BSPP 1/4" thread.

- one for filtered non-regulated air (A) for use, for example, with a compressed air gun.
- two for filtered regulated air (B).

The unit comes complete with supplementary plugged ports for use with A7 fittings.

## PANEL MOUNTING

ONE can be mounted inside the guard of the machine leaving only the front visible. This is a considerable advantage in terms of functionality and aesthetics as the user interface is entirely at the front.

Among the accessories to be ordered separately, there is the kit of brackets for panel mounting.

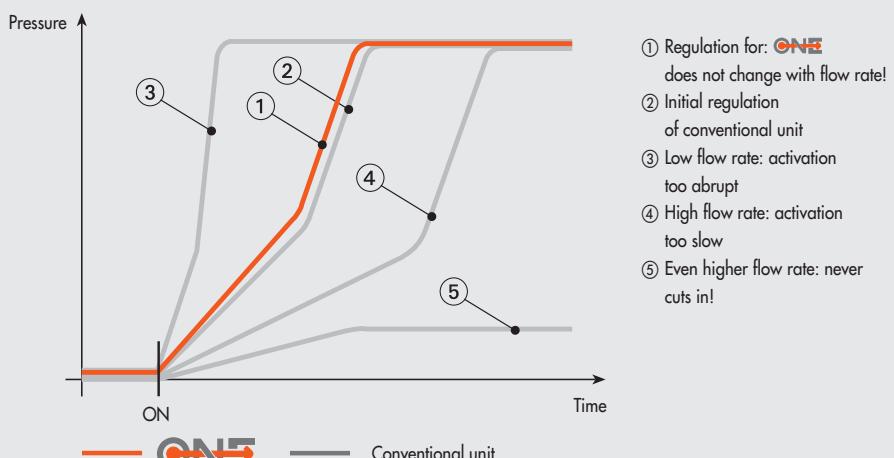

## ELECTRICAL CONNECTION

A standard five-pin M12x1 connector, with IP67 protection is used for the opening solenoid valve and the pressure switch.

One cable only is required, thus improving reliability and reducing wiring times.

## SOFT START VALVE

- ① Regulation for: **ONE** does not change with flow rate!
- ② Initial regulation of conventional unit
- ③ Low flow rate: activation too abrupt
- ④ High flow rate: activation too slow
- ⑤ Even higher flow rate: never cuts in!

The soft start valve is an absolutely innovative feature among the functions provided by ONE. Soft start valve available from the trade are generally based on the principle of leaving the passage of a small amount of air until the downstream pressure reaches a set value, and then opening the passage fully. In this way, the rate at which the pressure increases depends on the flow rate of the utilities, which often feature a continuous flow rate, for example a blow, and thus the starter can hardly activate. The solution offered by One is such that the pressure increases gradually and it is independent of the flow rate of the utilities. Pressure increase can be regulated precisely via the knob at the front.

Another piece of news, among the several possible configurations you can have the soft start valve operated by the manual V3V

Solenoid valve power	W		3/0.3			
Solenoid valve voltage	V		24 VDC ± 10%			
Pressure interval settable on the pressure switch	bar		0.5 to 10			
Pressure switch hysteresis (not adjustable)	bar		bar 0.4 to 0.8 (see diagram)			
Maximum pressure switch current	A		0.5			
Maximum pressure switch voltage	V		3 to 30 AC/DC			
Pressure switch contacts			Normally open (NO) and normally closed (NC)			
Number of switching			5 x 10 <sup>6</sup>			
Weight	pounds		From 2.53 to 2.75 according to configurations			
Wall fixing (max. panel thickness 0.4 inch):			Front, with M5 x 75 screws or back, with M6 x 70 screws			
Mounting position			The screws are included in the supply			
Direction of flow			Vertical			
			From left to right			
* Total flow rate from two supplementary outlets and the main one cannot exceed 141 scfm at 91 psi with ΔP 14.5 psi						
Compatibility with oils			Please refer to page 5-4 of the technical documentation			

## WIRING DIAGRAM

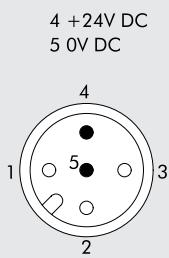

Version with solenoid valve and pressure switch

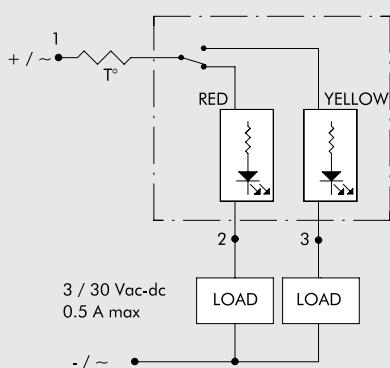

Version with pressure switch

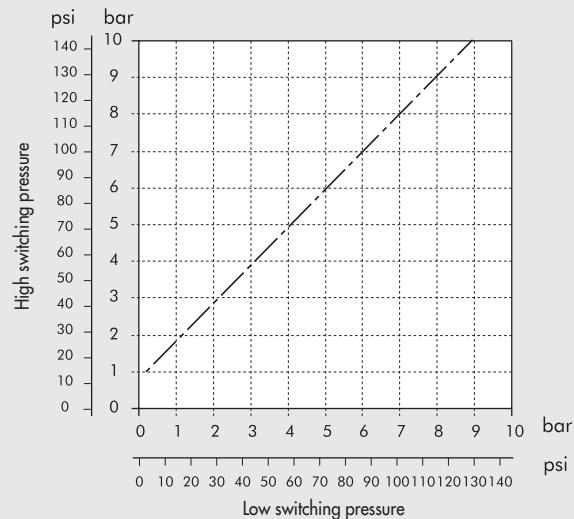

Version with solenoid valve

### PRESSURE SWITCH WIRING DIAGRAM

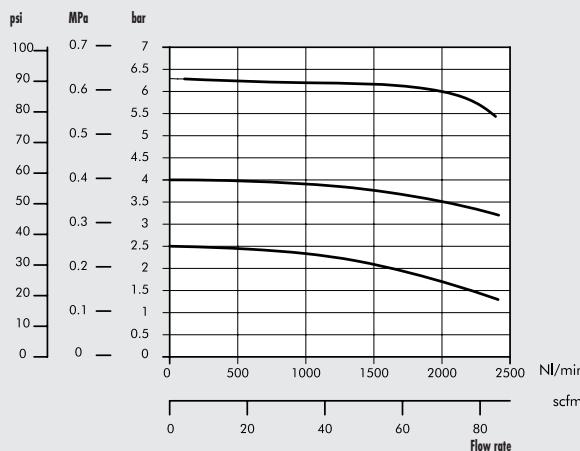

### PRESSURE SWITCH HYSTERESIS CHART

### FLOW CHARTS

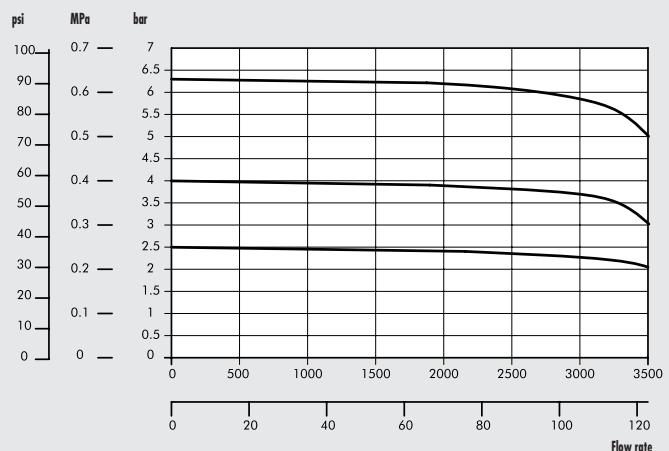

1/4"

$P_m = 8 \text{ bar} - 0.8 \text{ MPa} - 116 \text{ psi}$   
Preset pressure

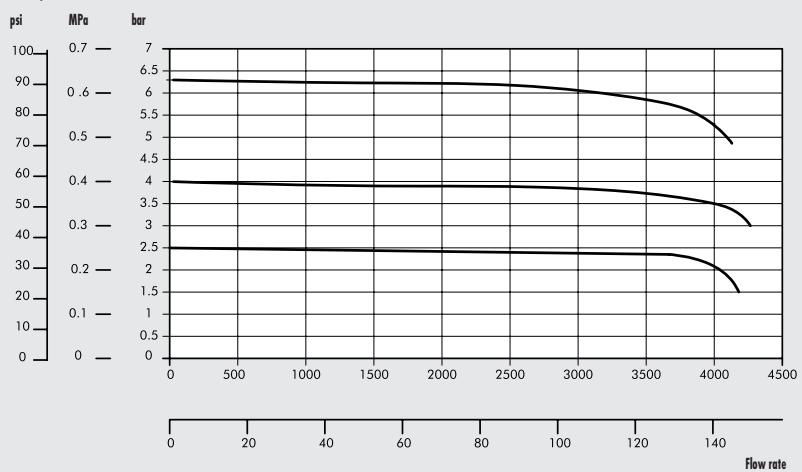

3/8"

$P_m = 8 \text{ bar} - 0.8 \text{ MPa} - 116 \text{ psi}$   
Preset pressure

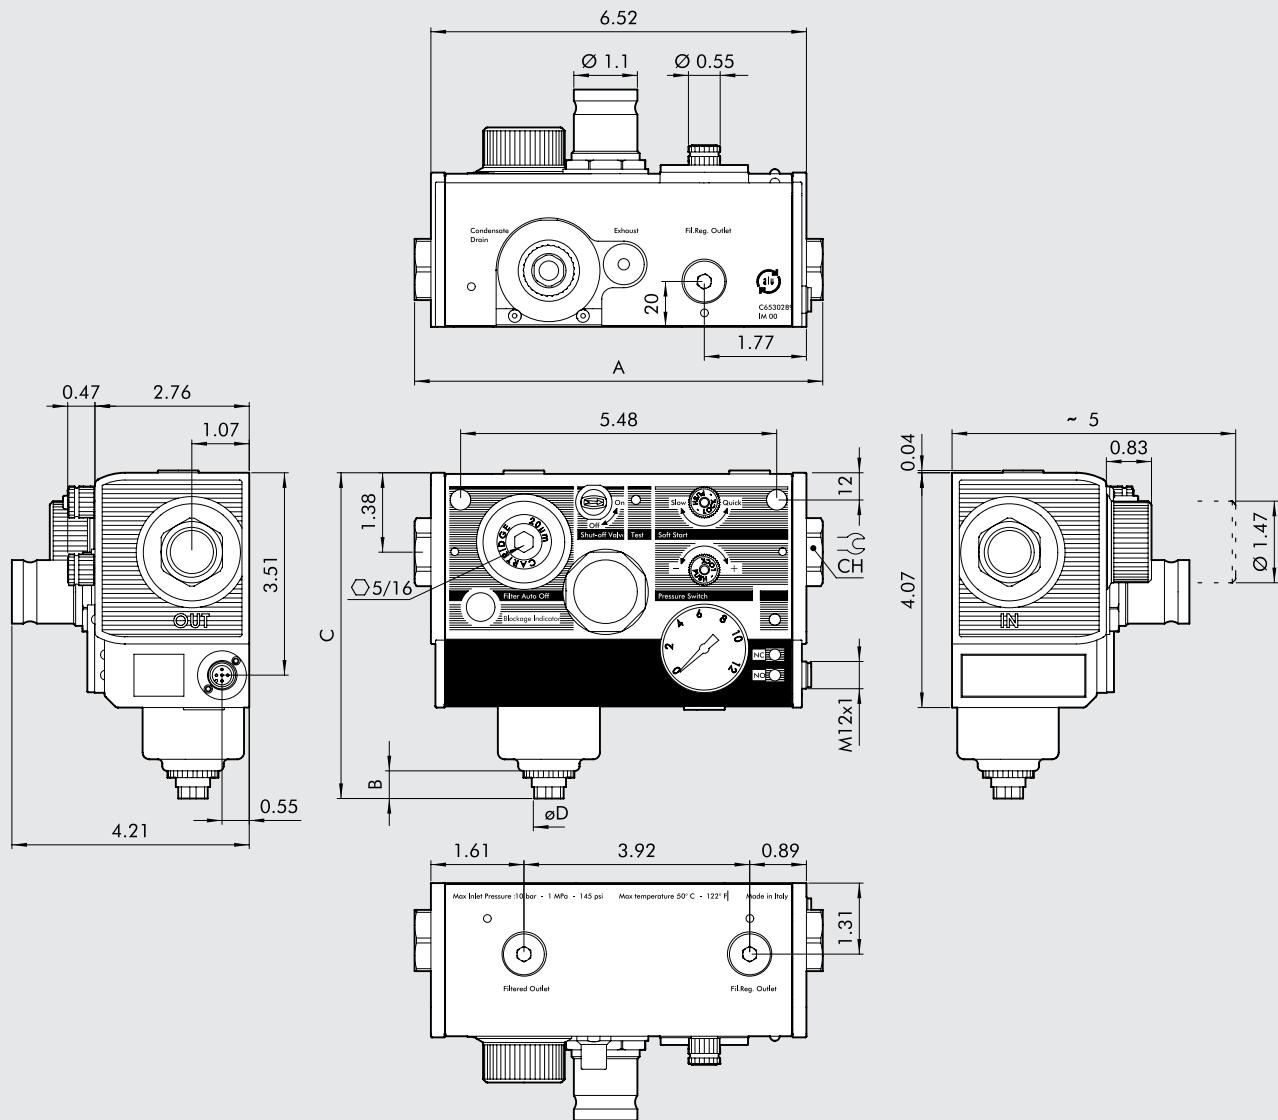

1/2" - 3/4" - 1"

$P_m = 8 \text{ bar} - 0.8 \text{ MPa} - 116 \text{ psi}$   
Preset pressure

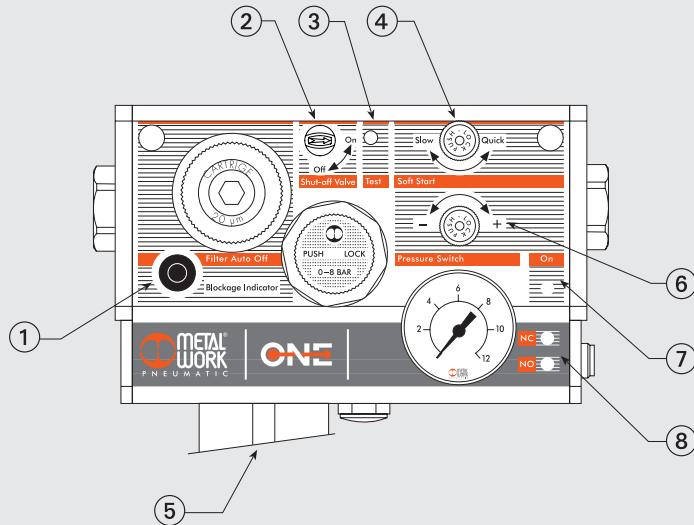

## DIMENSIONS

	1/4"	3/8"	1/2"	3/4"	1"		RA	RMSA	
A			180						
CH	3/4 (19 mm)	7/8 (22 mm)	1" 1/16 (27 mm)	32 mm	36 mm		0.8	0.64	
							C	5.67	5.83
							Ø D	For pipe internal diameter 6 mm	0.6

## EXTERNAL DESIGN

You can get thousands of different configurations. The external design differs according on the versions chosen.

<b>CLOGGED FILTER SIGNAL</b> (1)	<b>V3V MANUAL</b> (2)	<b>V3V ELECTRICAL</b>	<b>SOFT START VALVE</b> (4)
<b>PRESENT</b>   in course of signalling  <b>NOT PRESENT</b>  	<b>STANDARD</b>  <hr/> <b>LOCKABLE</b>  <hr/> <b>NOT PRESENT</b>  plug	<b>PRESENT</b>  Manual control  <b>Led</b> <hr/> <b>NOT PRESENT</b> in some versions holes are present  holes <hr/> in other configurations the cover has no holes  holes	<b>PRESENT</b>  <hr/> <b>NOT PRESENT</b>

# HOW TO ORDER

## ORDERING CODES

You can choose among numerous variants and options. The product code so personalised is made up by compiling the diagram below. The code so compiled must be specified on the order. A label showing the code and its pneumatic diagram is affixed onto the product.

EXAMPLE

UNITS

ONE: HOW TO ORDER

**A**

**B**

**C**

**D**

**E**

**F**

**G**

**H**

**I**

**L**

ONE electrical or ONE non-electrical	Air intake	Degree of filtration	Clogged filter signal	Condensate drain	Pressure regulation	Valves	Pressure switch	Air outlet	Miscellaneous, special version	
<b>54</b>	<b>A</b>	<b>2</b>	<b>1</b>	<b>1</b>	<b>2</b>	<b>7</b>	<b>1</b>	<b>A</b>	<b>0</b>	<b>0</b>

and  
V3V electric**

**6 V3V manual  
with  
padlock and  
V3V electric**

**7 V3V manula  
and APR electric**

**8 V3V manual  
with  
padlock and  
APR electric**

**9 only V3V  
electric**

**A only APR  
electric**

\* a pressure switch version and/or electric V3V and/or electric progressive actuator.

● NB: versions valid only for the electric ONE (code 54...)

## A ONE electric or non-electric

**ONE non-electric:** there is no component actuated electrically: select code 53. In this case, the unit comes without any M12x1 connector, LED, pressure switch, or electric V3V.

**ONE electric:** there is at least one component actuated electrically, and thus the pressure switch and/or electric V3V (and/or the electrical soft start valve) select code 54. In this case, the unit comes with the M12x1 connector and 3 LEDs. Only the LEDs associated with the functions installed will be active.

## B Air intake

There are 5 different threads: 1/4", 3/8", 1/2", 3/4" and 1".

## C Degree of filtration

A cartridge with a degree of filtering of 5 µm (790 microinch) yellow or 20 µm (2000 microinch) white is available. This value is marked on the plug.

## D Clogged filter signal

If the filter gets so clogged up that it causes an excessive drop in pressure as the air passes through, the orange indicator will project from the body by a few millimetres.

## E Condensate drain

**RMSA:** the condensate is drained out automatically only by relieving the air pull the knurled knob for having the same result.

**Automatic (RA):** a floating system that automatically drains the condensate out whenever the level of water in the bowl reaches the set value.

## F Pressure regulation

There are three possible regulation fields.

The value is marked on the regulation knob..

## G Valves

There are 11 different combinations. The electric valves are clearly selectable only if the initial code is 54, i.e. ONE electric.

- 0 - No valves present
- 1 - V3V manual: is a 3/2 valve that in a set position allows the air to flow and in the other it closes the passage and discharges the pressure downstream.
- 2 - V3V manual with padlock: like the previous one, with the possibility of inserting a padlock (included in the supply with 2 keys) in the valve closed position.
- 3 - V3V manual and soft start valve: when the manual V3V valve is operated, the pressure starts to increase slowly, with a fine adjustable ramp, and when it reaches about 30-40% of the set value, the valve opens completely and the pressure rises to the set value.
- 4 - V3V manual with padlock and soft start valve: like the previous, with the padlock device on the manual V3V in "OFF" position.
- 5 - V3V manual and V3V electric: two V3V in series are present, one is manual the other electrical. By operating both the valve the air flow is allowed. If one or two are switched OFF, the air downstream is relieved. The electrical one can also be operated manually by pushing the "TEST" button
- 6 - V3V manual with padlock and V3V electric: like the previous, with the padlock device in "OFF" position.
- 7 - V3V manual and APR electric: One manual V3V and one soft start valve are present. When both are operated, the pressure starts to increase slowly, with a fine adjustable ramp, and when it reaches about 30-40% of the set value, the valve opens completely and the pressure rises to the set value.
- 8 - V3V manual with padlock and APR electric: like the previous, with the padlock device on the manual V3V in "OFF" position.
- 9 - V3V electric: It's present only the electrical V3V. The valve will open if it is powered on. When the power supply is switched off, the valve closes and air downstream is relieved. The valve can also be operated manually by keeping pushed the test button.
- A - APR electric: It's present only the electric soft start valve. When it is powered ON, the pressure starts to increase slowly, with a fine adjustable ramp, and when it reaches about 30-40% of the set value, the valve opens completely and the pressure rises to the set value.

## H Pressure switch

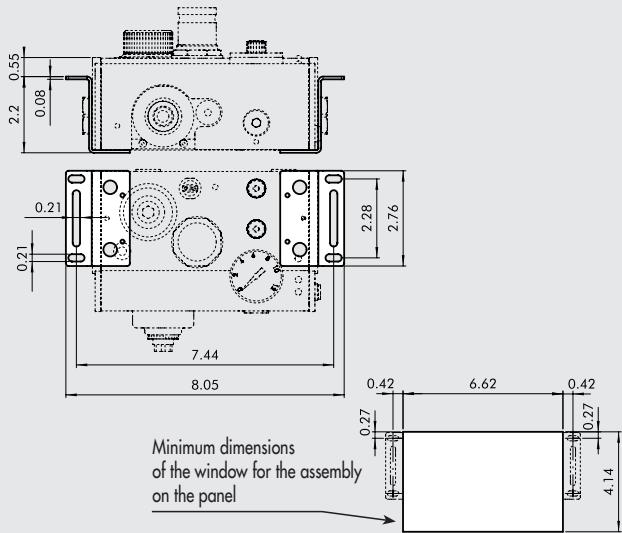

The pressure switch has a switching contact, which means you can have a normally-open signal or a normally-close signal. It is also connected to the NC and NO LEDs which come on if the actual pressure is less or greater than the set pressure, respectively. The LEDs only come on if an electric charge is connected to them.

## I Air outlet

Five different threads are available: 1/4", 3/8", 1/2", 3/4" and 1". It is possible to choose a thread other than the one on the inlet port.

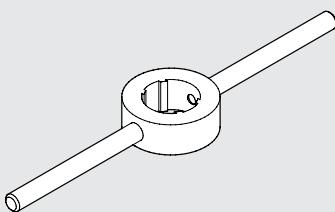

## L Free positions for special executions.

### PANEL MOUNTING BRACKETS

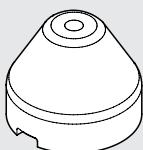

Code	Description
9200702	Kit – panel mounting brackets NB: fixing screws included

### COVER DISASSEMBLY WRENCH

Code	Description
9170401	Cover disassembly wrench

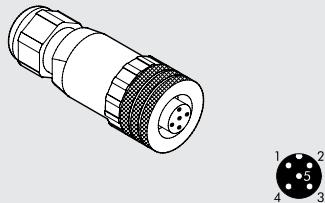

### SECURITY KNOB

Code	Description
9200703	Security knob apr./pressure switch

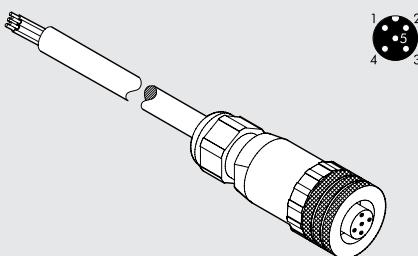

**NOTE:** Pull outwards to remove the knob from the APR/pressure switch on the unit. Insert the security knob and regulate the APR/ pressure switch. Then press the handle firmly to lock it in position. If the APR/pressure switch needs to be reset, remove the security knob by forcing it laterally with a screwdriver.

### STRAIGHT CONNECTOR

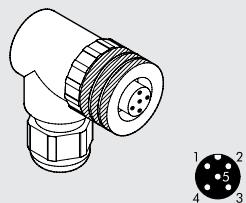

Code	Description
W0970513001	5-PIN M12X1 straight connector

### STRAIGHT CONNECTOR WITH WIRE

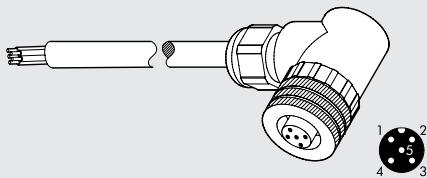

Code	Description
W0970513002	5-PIN M12X1 straight connector with wire L = 197 inch

### 90° CONNECTOR

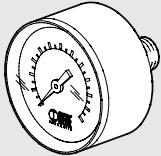

Code	Description
W0970513003	M12X1 5-PIN 90° connector

### 90° CONNECTOR WITH WIRE

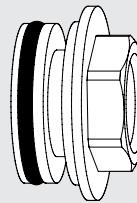

Code	Description
W0970513004	M12X1 5-PIN 90° connector with wire L = 197 inch

## PRESSURE GAUGE

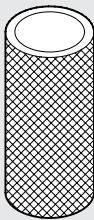

Code	Description
9700106	M 39 1/8 0-4 (0 to 60 psi)
9700107	M 39 1/8 0-12 (0 to 180 psi)

## THREADED PORT

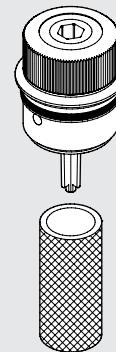

Code	Description
9232001U	1/4" spare thr. port for ONE
9232002U	3/8" spare thr. port for ONE
9232003U	1/2" spare thr. port for ONE
9232004U	3/4" spare thr. port for ONE
9232005U	1" spare thr. port for ONE

## FILTER ELEMENT

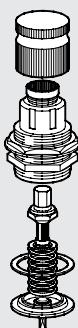

Code	Description
9251720	Spare filter element 5 µm for ONE
9251721	Spare filter element 20 µm for ONE

## FILTER PLUG WITH FILTER ELEMENT

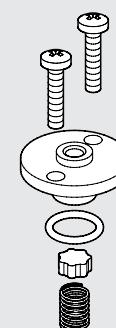

Code	Description
9251723	Spare plug + filter element 5 µm (790 microinch) for ONE
9251724	Spare plug + filter element 20 µm (2000 microinch) for ONE

## PILOT REGULATOR

Code	Description
9250820U	Spare pilot reg. 7 to 30 psi for ONE
9250821U	Spare pilot reg. 7 to 60 psi for ONE
9250822U	Spare pilot reg. 7 to 120 psi for ONE

## POPPET

Code	Description
9250707	Spare poppet for ONE

**SOLENOID VALVE**

OLD

NEW

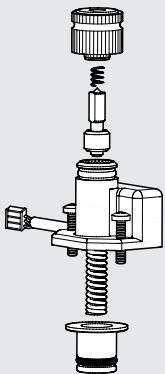

**Code** W4005001150    **Description** Spare sol. valv. for ONE

722123840101 PLT-10 7221233840101

To order the correct spare part of the solenoid valve, we beg you to compare the pictures appearing above with the one you have and then order the related code.

**PRESSURE SWITCH**

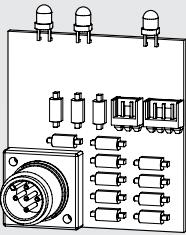

**Code** 9000500    **Description** Spare press. switch for ONE

**Note:** with this kit we suggest you should order also the gauge, as it could get damaged during the disassembly.

**ELECTRIC BOARD**

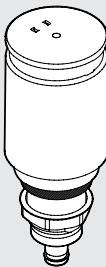

**Code** 9232010    **Description** Spare electric board for ONE

**Note:** with this kit we suggest you should order also the gauge, as it could get damaged during the disassembly.

**AUTOMATIC DRAIN (RA)**

**Code** 9000802    **Description** Spare automatic drain (RA)

**NOTES**
